

# Opera Dragonfly - Comprehensive web development tool

Opera Dragonfly, Opera's development tool, has released the full version today. Safe to take off, the new Opera Dragonfly has come out with a collection of tools needed for faster, easier and smarter web development.

**Opera Dragonfly, Opera's development tool, has released the full version today.** Safe to take off, the new Opera Dragonfly has launched with a collection of tools needed for faster, easier and smarter web development.

Three reasons why developers should add Opera Dragonfly to their web development "weapons" store:

## 1. Design tool

Our Chief Technology Officer is a creator of CSS, so we are very interested in designers. Opera Dragonfly offers a wide range of tools to help designers create a diverse Web world. Use advanced color picker tools to choose the most accurate color, preview font changes in real time using the Resource Inspector tool and Scalable Vector Graphics error correction (Variable Vector Graphics). - SVG).

## 2. Become mobile

If you develop mobile Web applications, Opera Dragonfly has many tools to make mobile development easier. To debug on mobile devices simply turn on remote debugging mode - Opera Dragonfly will connect to Opera Mobile and allow you to work directly on the device. You can even hack websites on your tablet, TV or colleagues computer with the remote debugging feature.

### 3. Always up to date

Opera Dragonfly is what we call hybrid web apps. That means you will never have to worry about updates, since the latest version is automatically taken from the Web. And Dragonfly will always be compatible with the version of Opera you use.

And everything else you expect from an eye-catching tool like: direct editing, thoroughly debugging JavaScript, DOM inspector, network testing, and more.

David Storey - Director of Web Development and Product Management for Opera Dragonfly - said. '*Opera Dragonfly is more refined, beautiful and better than previous releases. But don't just believe us, but experience it yourself and see if it makes your day a little more beautiful .*'

#### Where is Opera Dragonfly located?

Just right-click and select '**Inspect Element**' from your Opera browser. It is done. You can download the free Opera browser at <http://www.opera.com/> or [www.download.com.vn](http://www.download.com.vn).
