

# Opera GX - Browser for gamers allows to limit CPU and RAM usage, adjust RGB interface

Opera GX with the ability to limit resource usage will help the computer to perform better while playing the game and turn on the browser.

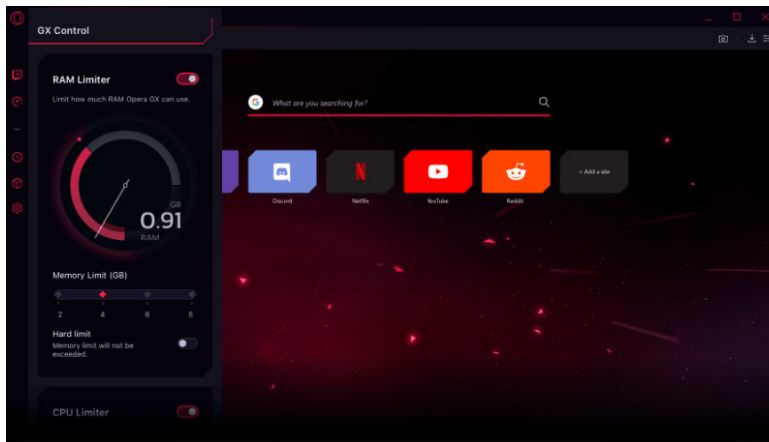

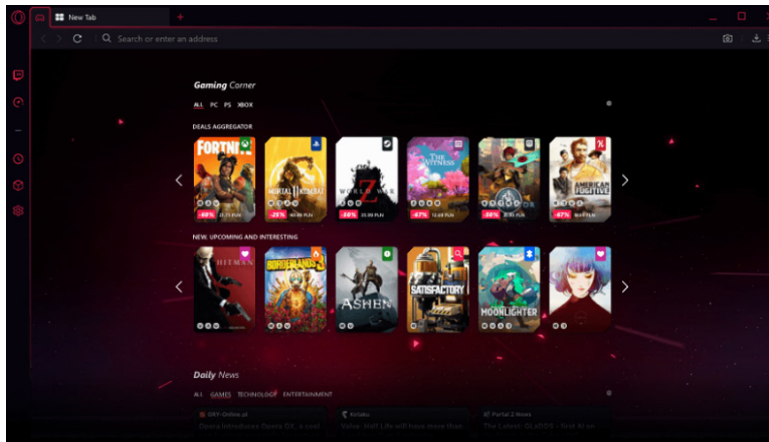

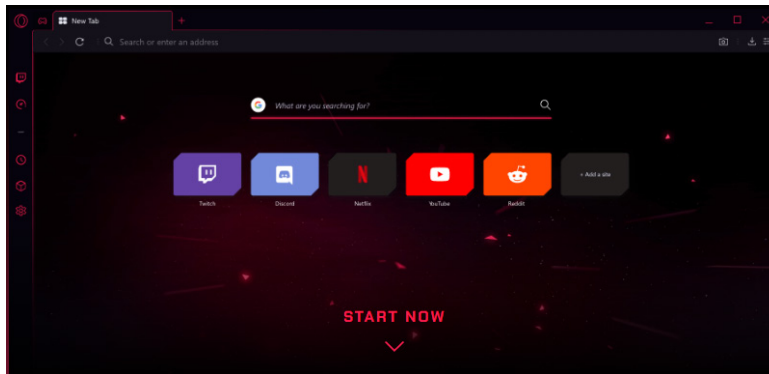

At the 2019 E3 event, the world's largest game fair, Opera introduced a new browser for players called Opera GX. This browser allows users to limit CPU and RAM resources when using the browser, which makes the performance unaffected when playing games.

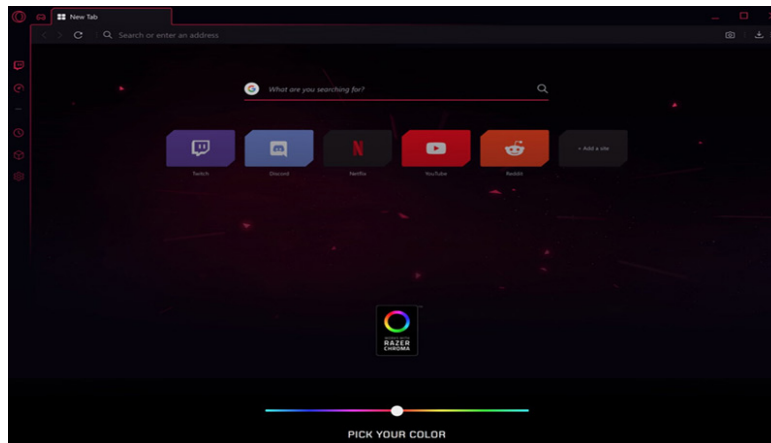

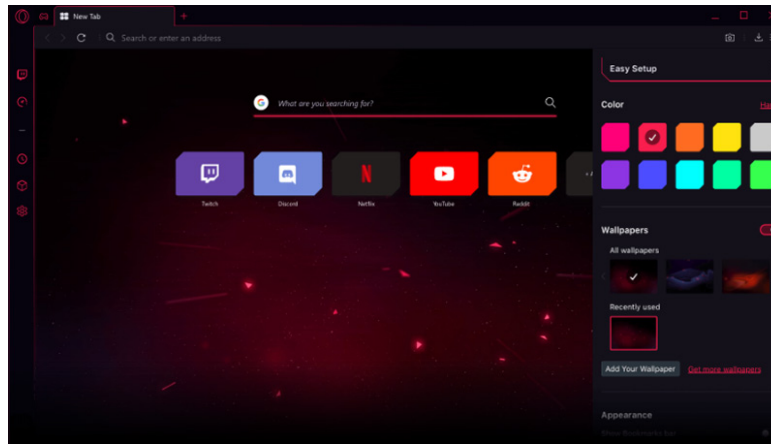

Some browsers currently consume a lot of RAM when operating, most notably Chrome. Opera GX with the ability to limit resource usage will help the computer to perform better while playing the game and turn on the browser.

Opera GX by default has black and red tones but this is a browser for gamers so you can customize other colors to suit your computer system.

The notification panel displays the resource usage level that will appear on the interface and also allows users to customize the color according to their preferences.

Opera GX is still equipped with popular features on Opera browser normal version like chat window Messenger, WhatsApp, free VPN service, ad blocking, chat window Messenger, WhatsApp.

Currently, Opera GX browser only supports Windows, macOS because it is not a popular operating system for gamers.

To download Opera GX, you can visit the link below.
