

Opera introduces Opera Mail email management application

Opera Mail is quite gentle, focusing on a single task to make it easier for users to manage email.

The browser developer from Norway is Opera recently launched Opera Mail email management application as a standalone application for PC devices.

Opera said the advantage of Opera Mail application is that it is quite gentle, focusing on a single task to help users manage email more easily.

Some notable features on Opera Mail are:

1. Card interface, lets you view multiple emails at once, as well as switch between emails quickly.
2. **Thread:** The view makes it easy to "follow" the messages you care about. You can choose **Ignore Thread** to **unsubscribe the** topic if you feel you are no longer related to that content.
3. **Filtering and labeling:** Opera Mail uses automatic filters and labels. You can set all mail to be automatically labeled or automatically filtered according to the rules set by you.

Windows users can now download and experience Opera Mail [here](#) .
