

Opera was officially launched, switching to Chromium engine

After a month of testing, Opera officially launched its new version of the web browser yesterday, for both Windows and OS X.

After a month of testing, Opera officially launched its new version of the web browser yesterday, for both Windows and OS X.

The new Opera browser is based on Chromium in place of the old Presto engine, promising to speed up operations and open web pages. In addition, Opera Turbo now has a new name called Off-road and the email manager previously built into the browser has also been separated into a separate software.

Download **Opera Next** for Windows.

Opera said the new version was rebuilt from scratch, not upgraded from older versions. Specifically:

Speed ??Dial improved

Speed ??Dial is Opera's default homepage that uses the shortcut of websites you visit. In the new version, you can gather multiple websites into one folder for easy management as well as add a search box to filter out the

websites you need.

Discover: follow the latest news

This is a new feature that lists the hottest news from famous news sites around the world. You can optionally filter news by country and topic, such as technology news, science, health .

Stash: just like Bookmark

Opera Next no longer manages Bookmark in the old way, but instead uses *Speed* ??*Dial* and *Stash* to store web pages you save. When you encounter a good website that you want to save, you can click on the heart icon at the end of the toolbar, the site will be saved in the *Stash* section of Opera. In *Stash* you can also search and change their display size for easy viewing.

Change the new engine Chromium, Off-Road instead of Turbo, separate the email from the browser

Opera Next no longer uses the old Presto engine, but it also switched to Chromium, which is the same engine with the famous Chrome browser, which speeds up operations and opens the website. In addition, Opera Turbo now has a new name called Off-road and the email manager previously built into the browser has also been separated into a separate software.
