

OPPO Find X2: experience the super anti-shake movie feature on OPPO Find X2

OPPO Find X2, a careful investment in both camera hardware and software, has brought significant changes to the image quality on OPPO Find X2

Along with the development of video sharing platforms as well as social networks such as Youtube, Tiktok, the feature of filming on smartphones has become more and more noticeable by young people. When motion is the attraction that makes the "brand" of scenes filled with art, it also poses a great challenge for the camera.

It goes without saying that OPPO has long been a favorite among young people for its ability to take great pictures both quickly and easily. Especially the "genuine" smartphones like OPPO Find X2, the investment in taking care of both camera hardware and software has brought significant changes to the image quality.

However, unlike normal photography, video capture requires more breakthrough than that. Not only does it retain all the details, colors, and lighting as "original" but on top of all the video footage must be smooth and smooth in order to make people enjoy the feeling of "discomfort" "when it comes to moving scenes that occasionally stumble, or shake.
