

OPPO Find X2 launched in Vietnam, the first smartphone with 5G

OPPO Find X2 is remarkable product, converging many new technologies is currently a 'trend' of 2020.

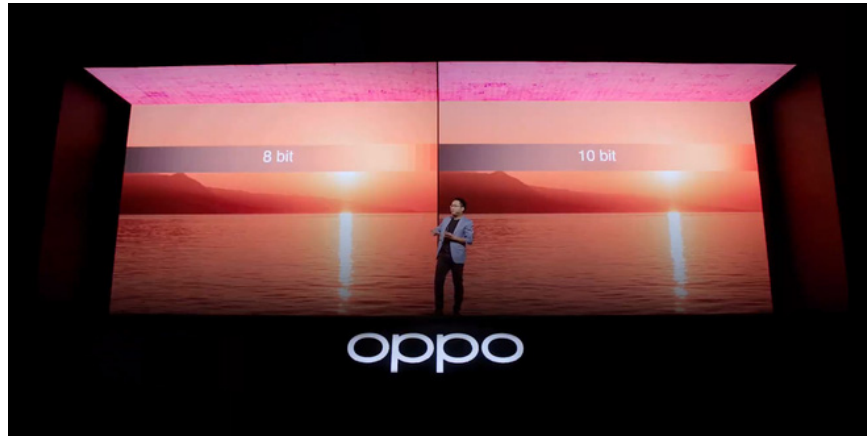

As expected, OPPO today officially announced its most advanced product, the *Find X2*, to the Vietnamese market. In the context of SARS-CoV-2 epidemic is raging, the company has also quickly organized an online livestream program instead of meeting face to face.

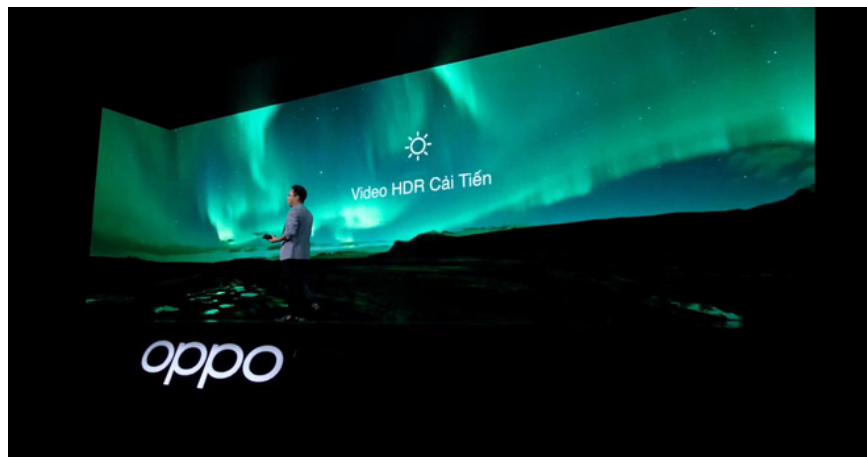

Find X2 is as the name implies, an upgraded version of the popular Oppo Find X launched in 2018. This product has many upgrade points, but the most significant of which is the screen, processor and Fast charging capability.

The OPPO Find X2 AMOLED screen has a large 6.7-inch 2K resolution, especially with a refresh rate increased to 120Hz - giving gamers the advantage in fast-action games.

The screen has 10-bit color coverage, according to the company introduced, it will help the steps of gradation in photos and movies become smoother.

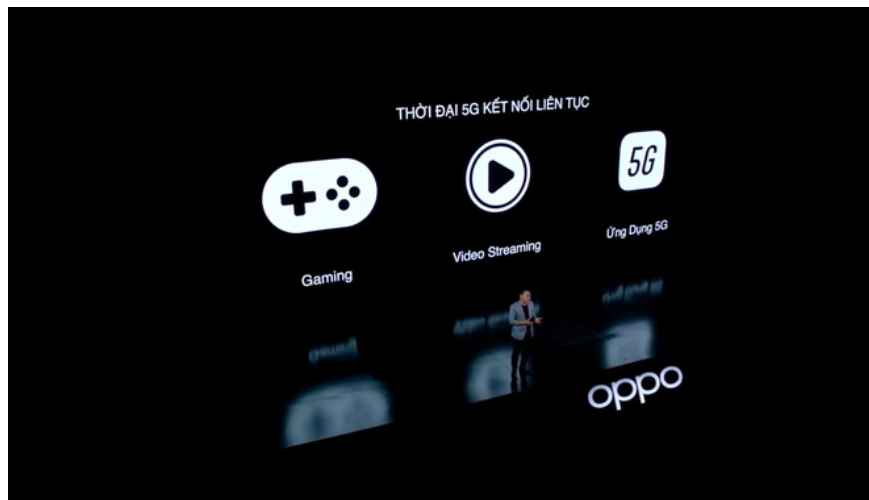

Support for this monitor is the O1 Ultra Vision software, which can upgrade the regular content for HDR10 +

Flip the device back, we have a camera system with 3 cameras including a 48MP high resolution camera, 12MP ultra wide camera and 2x 13MP zoom resolution.

Find X2 owns the most powerful configuration today, with Snapdragon 865 processor, up to 12GB of RAM to perform all tasks quickly. Included with this processor is the latest X65 module, ready for future 5G connectivity services.

The era of high-speed 5G is coming very close, supporting users in movie and game streaming applications

The 5G platform in Find X2 is provided by Qualcomm, built into the Snapdragon chip

Finally, the ability to fast charge, called Super VOOC 2.0 65W. With this technology, the 4200mAh battery (rather than 2 2100mAh batteries) of Find X2 can be fully charged in just 38 minutes, an impressive number.
