

Oppo plans LG G2 'brainwashing'

LG G2 runs Optimus interface designed by LG and is not the same with Color OS interface on Oppo Find 7 of Oppo. However, it seems that Oppo is trying to 'brainwash' LG G2 by bringing Color OS on this machine.

LG G2 runs Optimus interface designed by LG and is not the same with Color OS interface on Oppo Find 7 of Oppo. However, it seems that Oppo is trying to 'brainwash' LG G2 by bringing Color OS on this machine.

According to a new announcement by Oppo, they are testing a ROM with an interface similar to Color OS but on the **LG G2** models. Once completed, Oppo will officially release these ROMs for all LG G2 series.

LG G2 is about to run Color OS

Currently Oppo is also looking for those who use the unlocked version of LG G2 with the code of D802 to apply the program to test their new Color OS version.

It can be said that Oppo's work is unprecedented in the smartphone world because the interface is a sensitive issue and can cause discord among brands.

The default interface of LG G2
