

Oppo tested 5G with download speeds of up to 2Gbps

At the Oppo event in Australia, the company tested 5G technology and achieved download speeds of up to 2Gbps.

At the end of last May during the launch of the Oppo Reno in Australia, the company tested 5G technology right on its new smartphone Reno 5G. As a result, Reno download speeds reached more than 2Gbps, completely outperforming the highest technology 4G LTE-A only reached 300Mb / s. This gives the 5G technology industry outstanding development steps.

1. What is the difference between 4G and 4G networks?

Besides this launch event, the company also brought many advanced technologies of the Oppo 5G generation, such as improved camera, better performance, to increase the 5G connection for users.

5G network is now becoming a new trend globally, and the fierce race of 5G will soon happen in the future when many technology corporations have launched 5G connection products such as Huawei Mate X 5G, Xiaomi Mi MIX 3 5G, OnePlus 7 Pro 5G, ZTE Axon 10 Pro 5G, Galaxy S10 5G. With the Oppo 5G, this is the first smartphone to be sold in the European market with Switzerland, the UK and recently Australia.
