**TipsMake.com - Today, entertainment applications and games are growing strongly in both features and hardware configuration requirements. To be able to enjoy these powerful applications you also need to invest in faster hardware devices (upgrading RAM, graphics card .). This is unfortunate for older PCs or those who are unable to upgrade them.**

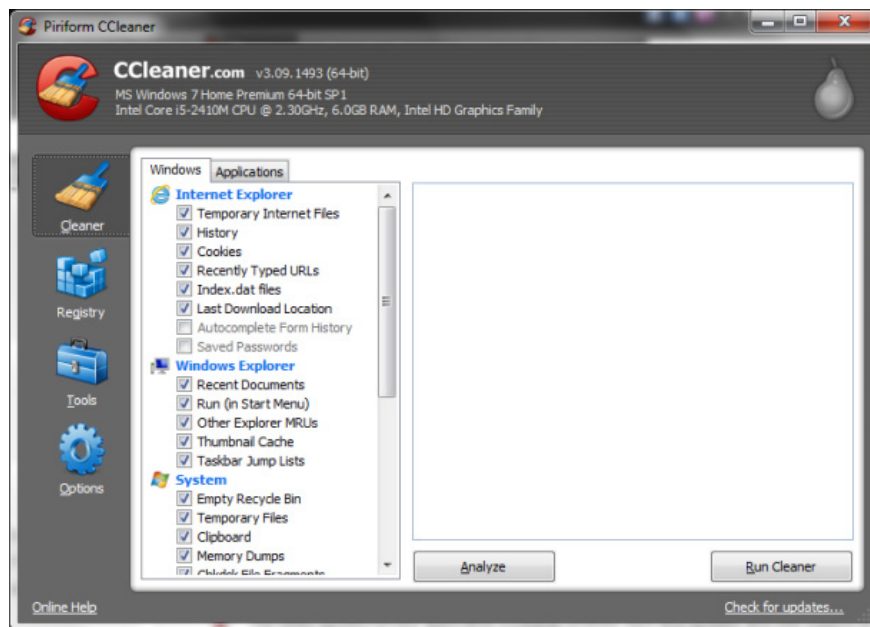

In this article we will show you some ways to optimize your Windows PC to make gaming smoother.

## Upgrade hardware devices

The most common problem when playing a heavy game is a slow card, insufficient RAM capacity, and a weak processor. Instead of purchasing a new computer, first check your hardware information in **Control Panel** , compare their specifications with the game manufacturer's recommendations, and then upgrade if necessary. . Changing RAM is the easiest for most PC users, but it is much more difficult for a video card or CPU for laptop users. However, this is always the most effective way.

## Clean up the hard drive

You may be the one who does this often, but not everyone, even though this is really useful. Users can run the **CCleaner** utility to scan the hard drive weekly. You should also update Windows automatically and set up defragmentation and hard drive checking more often. Open space hard disk will help the machine run more stable and faster.

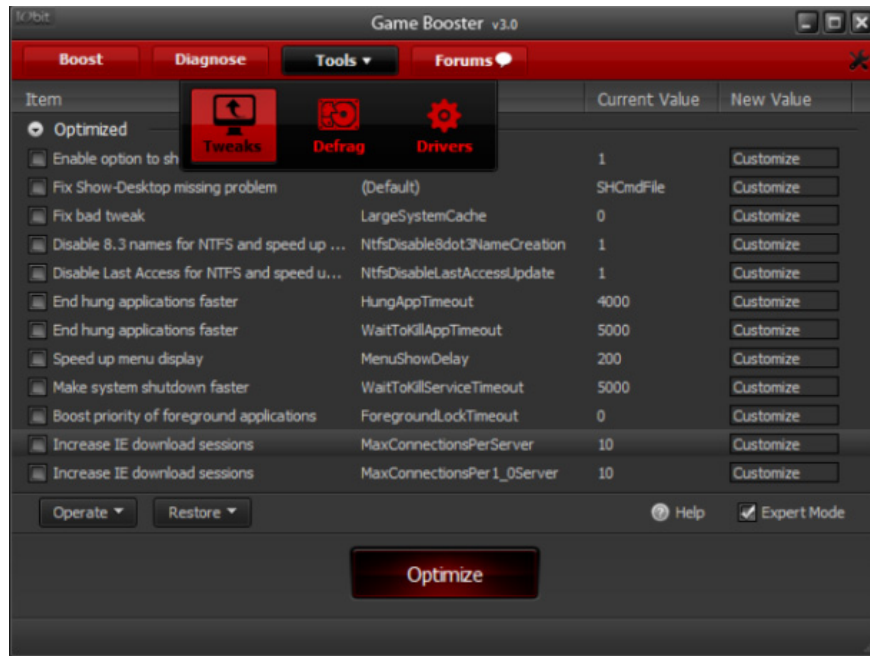

## Overclocking

This is a fairly high-level and risky measure. You can set up a video card or processor so that the device runs faster, but they will produce more heat so you need to keep in mind the cooling problem for the system, otherwise high temperatures will damage the device of the machine. If you don't know how to hack your hardware, it's best to skip this step.

## Use Game Booster 3

This is a free software for Windows that helps your system into a state that only supports games, so you can use more of your system resources to play games. The installation and use process is very easy, just run it, then Game Booster 3 will turn off unnecessary background applications and clean up RAM. As soon as you finish the game, you can restore your computer back to normal with just one click.

Game Booster 3 has many new features, one of which comes from users, and all these features will help users get better gaming experience than ever.

With just a few easy-to-use experiences, or a small investment in equipment upgrades will sometimes lead to improved performance, and cost savings compared to buying a new PC.
