

Or bad with the Dell Mini 10

The third Dell netbook is named Mini 10 with a large keyboard, which supports HDMI port but lacks a VGA port.

The third Dell netbook is named Mini 10 with a large keyboard, which supports HDMI port but lacks a VGA port.

Dell continued to penetrate the netbook segment with a third model called Mini 10. Earlier, it launched the Inspiron Mini 9 with an 8.9-inch screen, and the Mini 12 expanded 12 inches.

Mini 10 is a mini laptop with many innovations from design to equipment. One of the impressive integrations is that the HDMI port was first available on netbooks (previously available on the Asus N10, but this model is not considered a netbook).

It has a large keyboard and unique touchpad. *Photo: Dell* .

This is a handy little laptop, with a well-designed keyboard. Many people are not disappointed when placing their hands on the Inspiron Mini 10, the keyboard is only 8% smaller than a standard laptop keyboard, sensitive buttons, and interactive back.

The Mini 10's touchpad is also very unique, instead of using two buttons to control the left and right mouse buttons, now all are hidden in front of the trackpad. This provides users with more space to control. Just tapping your finger, the user can hover, but the Mini 10's touchpad is not a multitouch like the MacBook.

The connection of the device is also expanded. Not only HSDPA, Bluetooth and Draft-N Wi-Fi transmitters in the box, the Mini 10 also has an HDMI connector. However, it uses an Intel GMA 950 graphics card and an Atom processor, so running high-definition videos may not be as good.

This is the first Inspiron Mini to own a 16: 9 screen. Like the HP Mini 1000, the screen is mirrored, beautiful and luxurious. However, this equipment may make the machine more difficult to see, the image is reflected when outdoors.

Equipped with HDMI port, but the Dell Mini 10 does not have VGA. *Photo: Dell .*

HDMI port is a good equipment, but this netbook lacks a basic VGA port. This makes the Mini 10 seem decent, but not basic, because netbooks are currently not emphasized the ability to watch HD movies.

In addition, netbooks are devices that users move. However, the Mini 10 possesses a shiny, easy-to-fingerprint cover, which is annoying for those who are careful, want to preserve their laptop will have to clean more.

Another restriction is that from \$ 600 to \$ 670 (refer to Singapore), the Mini 10 compared to other 10-inch netbooks is still more expensive.

Machine may appear in Asia in mid-March this year. After that time, the company will have the option to upgrade equipment such as digital TV tuner, SSD hard drive, integrated GPS.
