Menu Bar:

Menu Image: Basic operations on the whole image.

Menu Layer: Actions on the current layer or selected area.

Menu Adjustment: Adjust the specifications.

Menu Effect: Add special effects.

Take a picture is available.

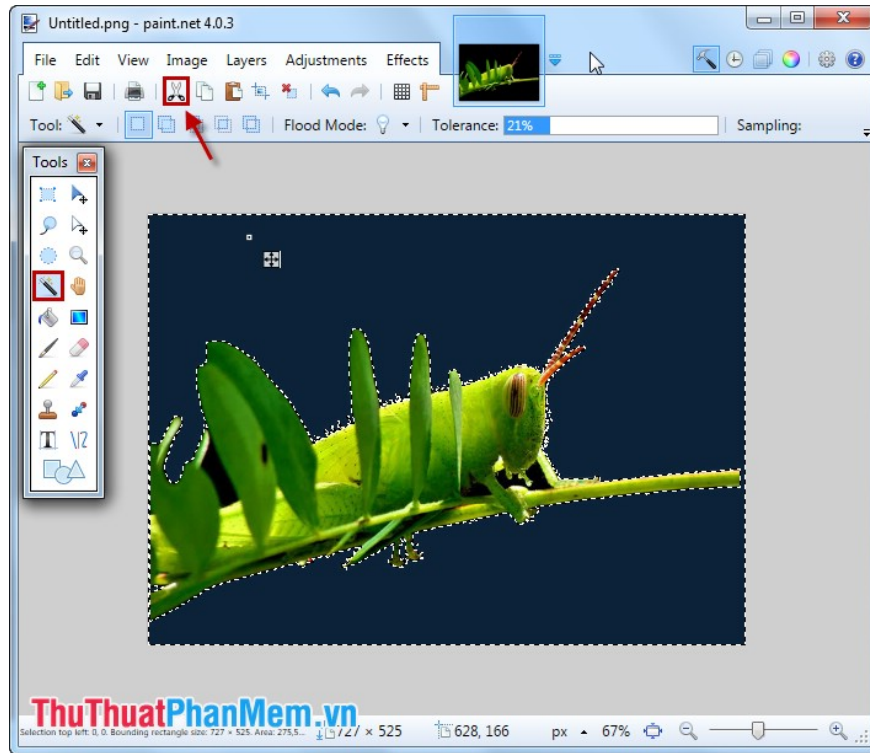

Click the **Print Screen SysRq** button on the keyboard.

Open **Paint.NET** and select **Edit -> Paste** (or **Ctrl + V**).

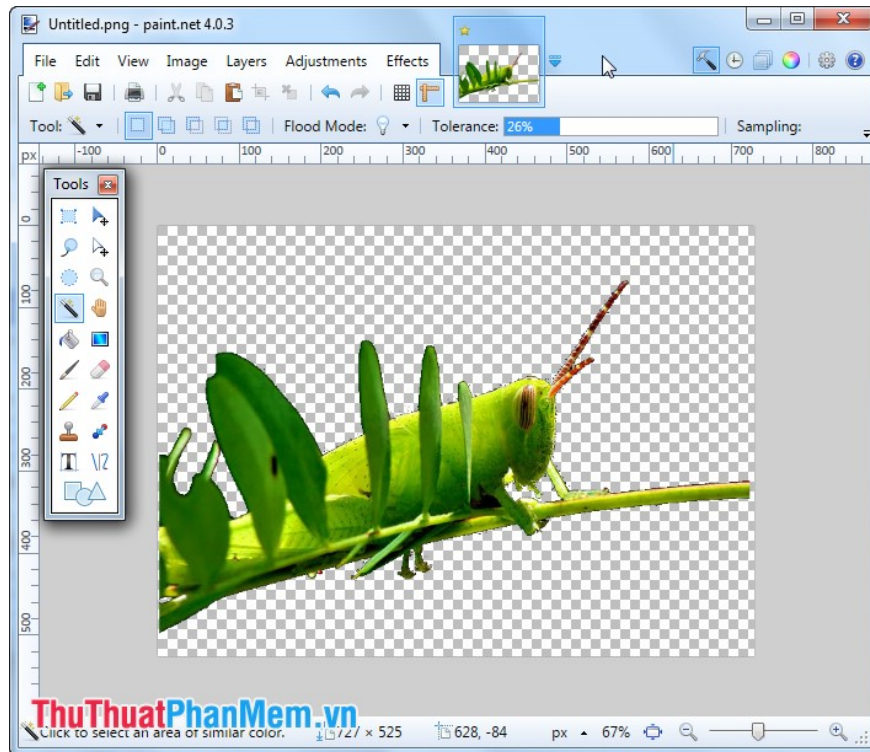

How to isolate an image from the background.

You choose **File** -> **Open** select the image you want to split, or drag the image into the Paint.NET interface.

You then use the "magic wand" to point to the unwanted color, then select the **Cut** icon or **Ctrl + C** combination .

Do the same with the rest of the areas so we will get a picture without a background.

*Note: You can **Room** to image to manipulate, you can use more **Eraser** (eraser) to remove excess.*

Resize, change image orientation.

You click on **Image** on the menu:

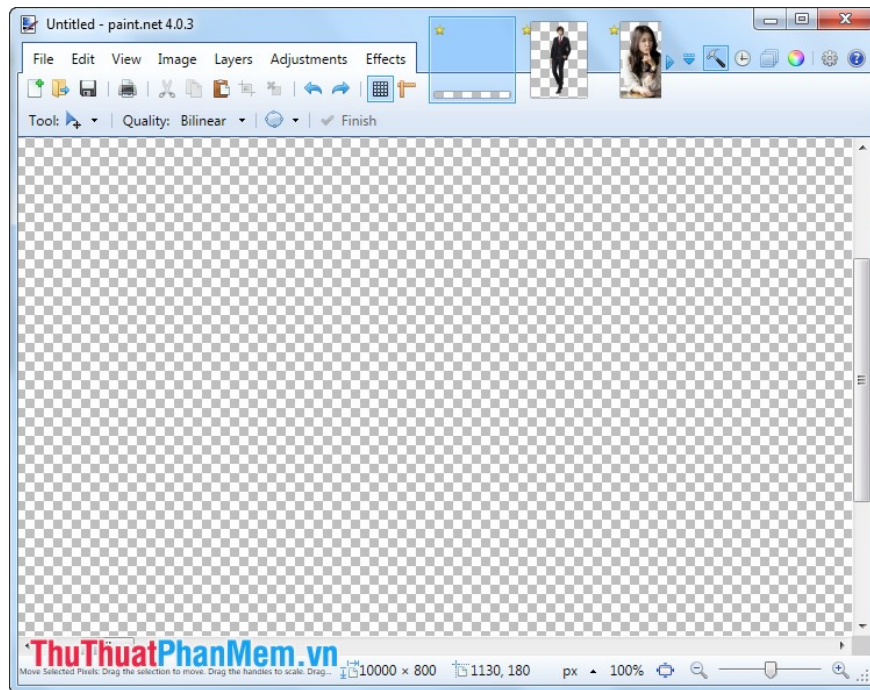

- To resize the image you select **Resize** then enter the image size you want to change and click **OK** .
- To change the direction of the image you choose **Flip Horizontal** (left, right), **Flip Vertical** (up, down).

Merge 2 or more photos together.

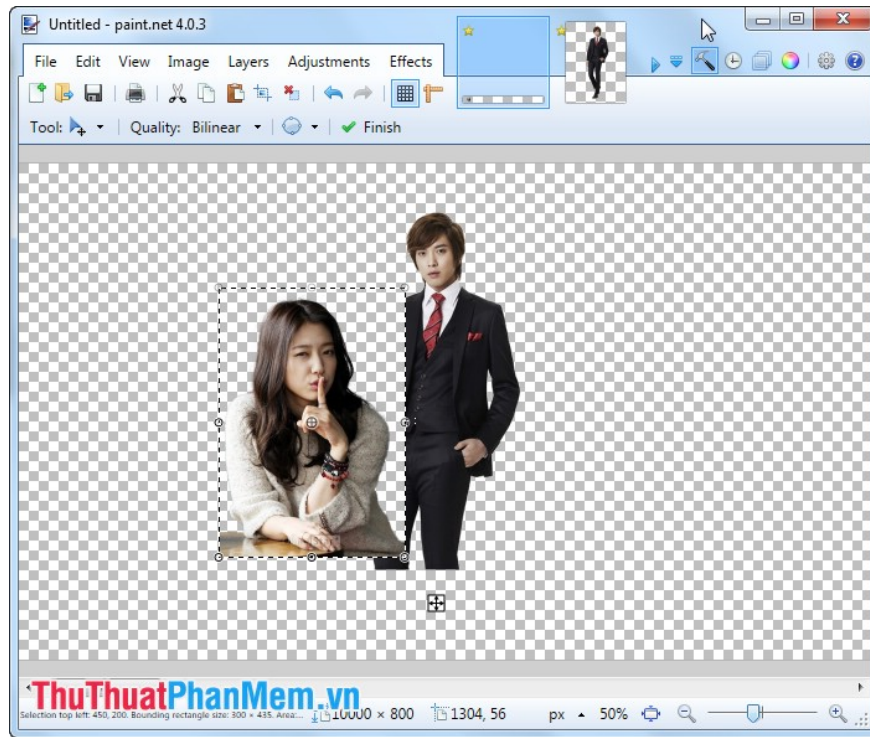

There are 2 pictures after removing unnecessary parts.

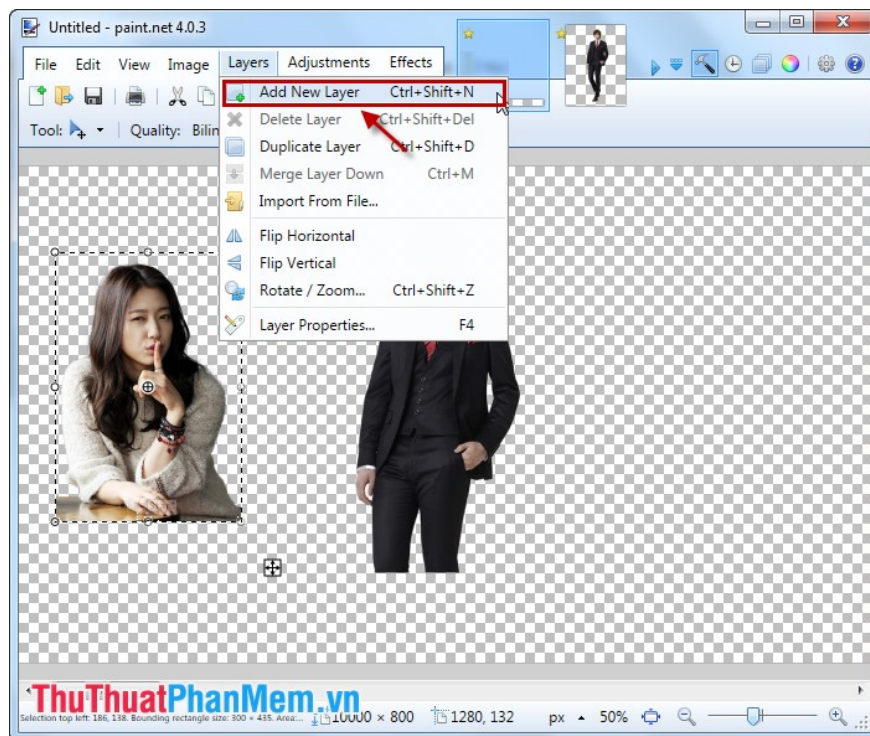

You choose **File** -> **New** to create a new page. Select the new page (**Ctrl + A**) then select the **Cut** icon (or **Ctrl + C**).

Copy each image and **Paste** to this new page.

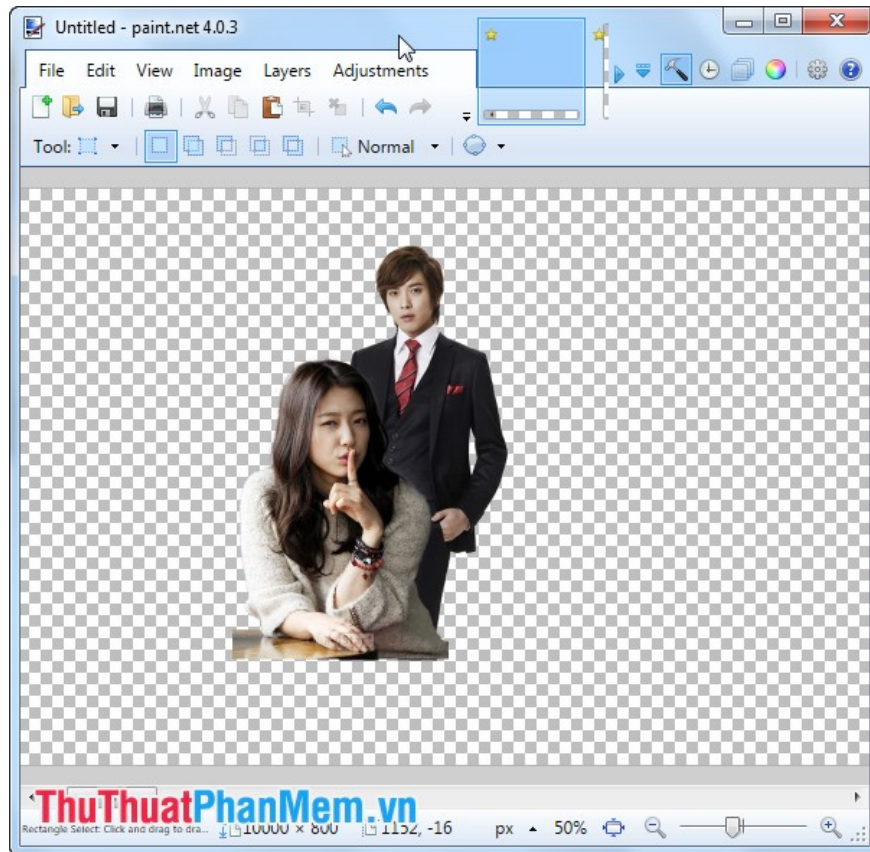

Select **Layers** -> **Add New Layer** .

Then **Paste** (**Ctrl + V**) and drag the cage onto the first image.

Then select **Layers** -> **Merge Layer Down** .

To make multiple pictures you can do the same.

Paint.Net is the perfect combination of Microsoft Paint and Photoshop. The program brings many useful features, above I introduce some features of Paint.Net, you can learn more about Paint.Net during use.
