So yeah, it's official. I'll be working @Apple for the next 4 months as an intern. Heading straight to the dark side.

#MayThe4thBeWithYou

2:10 PM - 4 May 2019 from [Apple Campus 2 \(The Spaceship\)](#)

John Wu shared that he will work at Apple as an intern on his Twitter page.

He chose an Android smartphone to post a Tweet.

John shared, he is still unsure about his work at Apple, but he will probably join the Siri virtual assistant development department.

In 2016, 20-year-old John Wu and a major in Computer Science at the University of Michigan (USA) created Magisk to replace SuperSU. Magisk can take root access of Android device but still keep all system files. Root with Magisk, the system runs more stable than SuperSU. In addition, Magisk also allows users to update the software and overcome the "anti-root" barrier of some applications.
