

Phone is not enough, Samsung will develop folding screen laptop

Recently, Samsung is working with many interesting projects.

Recently, Samsung is working with a lot of interesting projects, from folding phones to graphene batteries and below-screen cameras are examples of many technologies that Samsung is quietly developing. Recently, Korea Herald reported that Samsung has confirmed that it is preparing to create a new technology initiative: a laptop with a folding screen. Like folding screen phones, Samsung is collaborating with screen manufacturers to create laptops with foldable screens, not simply to fold in / open but also create new value, bringing to the table. interesting user experience between the trend of the laptop market is changing now, 'Samsung director Lee Min Cheol said.

The market that Min Cheol mentioned is still unknown. Laptops have not changed much in recent years, at least in terms of shape, size or basic features. (Perhaps the screen may be attached to the most noticeable change).

However, a large-sized notebook with a folding screen is sure to be a big change, whether it's necessary or practical or not, it has to wait and see. Of course that does not mean that owning such a device is completely useless.

It is not known what Samsung's folding screen laptop looks like

Flexibility will be a remarkable point. Laptops are probably not something that can be pocketed, but when designed in the form of folding screens, it is easy to put them in small bags or suitcases.

However, this is all just speculation. All we know now is that Samsung is working to produce a folding screen laptop, not sure what the results will look like or whether the product will be released.
