

# Photo scanning applications are effective on smartphones

Applications that scan images on smartphones will help us to remove traces like ghosts and flashes on images. From there, you can share photos on Facebook or via Gmail with significantly improved image quality.

It's not too hard for you to find a photography app and "take a selfie" for smartphones. However, if you want to restore old photos, remove old traces like smudges, ghosts, flashes, etc., you need to use other professional photo scanning applications. These photo scanning applications will help users to capture images without the blurring of blurring like when shooting with a phone. Since then, it helps to improve the image quality. After restoring old photos, we can share photos easily on Facebook, Instagram or email as you like. In the following article, Network Administrator will introduce you to 3 professional photo scanning applications on smartphones.

## 1. Google PhotoScan application:

1. Download the Google PhotoScan Android application
2. Download Google PhotoScan iOS for free

Google PhotoScan has a simple interface and we won't need to register. Users just need to capture the image to be scanned, then there will appear 4 dots on the image. You need to move the phone over 4 circles and hold it until the circle is filled. Once completed, your photo has been scanned.

The application will identify the photo corners, flatten the image surface, remove bright spots and cut the frame itself to best suit. Once completed, you can save images to Google PhotoScan, device albums or share on social networks.

Photos from the past,  
meet scanner from the future

Scan photos in seconds,  
glare-free

## 2. CamScanner application:
