

# Photos of Nokia making the phone 'brick' run Android

This is a basic phone with a bar design, the company's traditional numeric keypad is being tested with an operating system that is said to be another version of Android or Chrome OS.

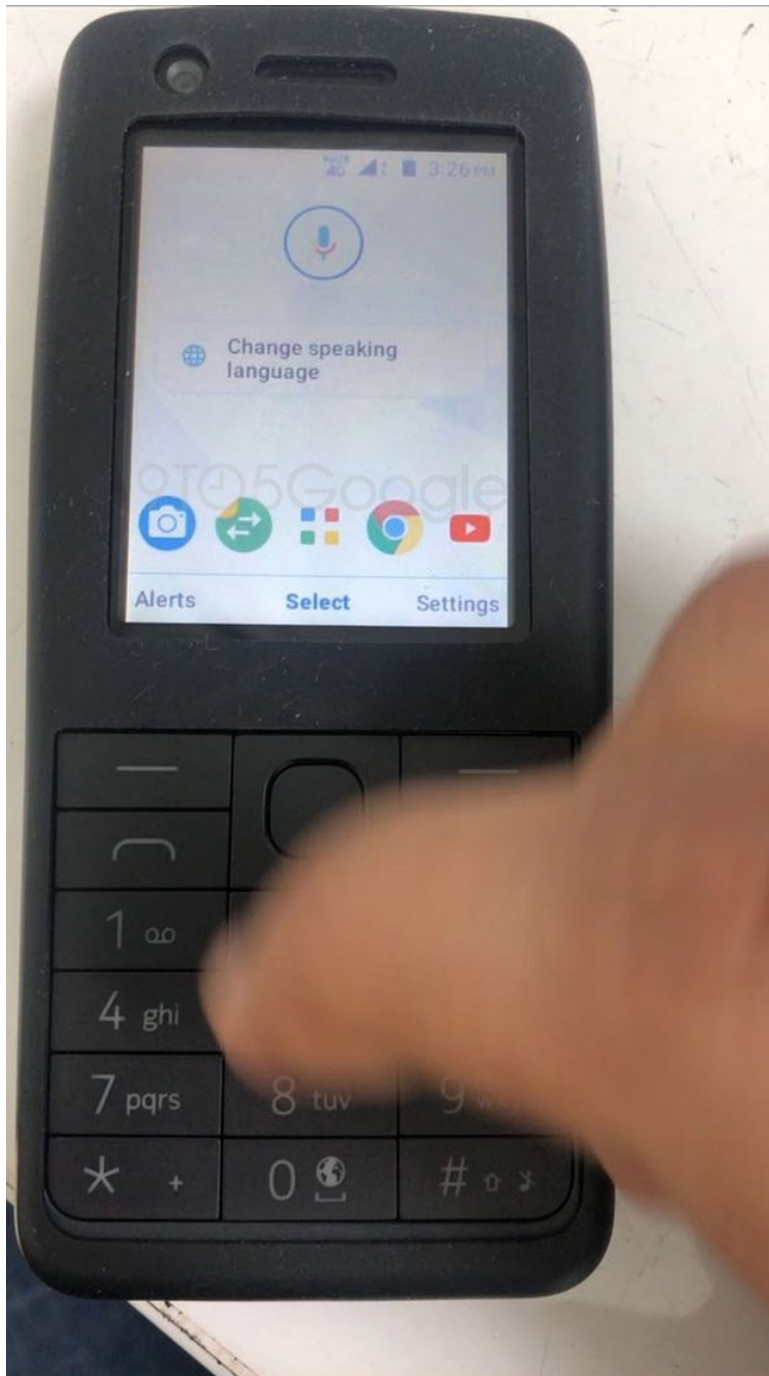

Nokia phone company has just revealed a new phone model on the Internet. But this is not a regular Android smartphone like a series of recent Nokia models that are a basic phone with a bar design, a traditional numeric keypad of the company being tested with the operating system. arguably another version of Android or Chrome OS.

It has a very small screen, no touch and the operating system interface has been designed to be suitable for use with hard keys. The device will still have many applications like on regular Android phones such as Chrome browser, YouTube, virtual assistant Google Assistant . Notification bar and Chrome application interface, YouTube also has all the features as on the system Android operator.

The interface runs on a basic Nokia phone.

Currently, Nokia has not disclosed the name and launch time of this Android brick phone model.

These leaked images show that HMD Global is trying to overcome the limitations of services such as the ability to synchronize contacts on the KaiOS platform on Nokia 8110 4G by integrating an operating system linked to Google. However, in order to achieve that, the company will have to try to optimize more so that it can operate with the popular phone hardware platform.
