

Photoshop - The 'white' tool for photos

A plug-in add-on for Photoshop called Pearl White will automatically 'locate' and suitably allow the teeth of the photographed person to become as shiny as the advertisement Close-up

A plug-in add-on for Photoshop called Pearl White automatically "locates" and allows the photographed person's teeth to be as shiny as Close-up ads .

And yet, Pearl White has the ability to light up the eyes, making the eyes in the image become more sparkling, radiant and fresh.

Source: PearlyWhites Professional photographers have a lot of tips to make their teeth whiter and eyes sparkling, so that portraits will become more vivid and sparkling.

Even so, even with the help of digital tools, it takes a lot of time to mark the areas of the teeth and eyes, then lighten appropriately without making the subject. shooting becomes fake.

But just spend 50USD, Image Trends Pearly White tool will take care of all the above mentioned tasks automatically. PCWorld experts have tried this software on two pictures of light skin and "chocolate" skin, and the effect is very clear.

The only thing you have to do is control the level of white light that you want, through a sliding design. However, one of Pearly White's drawbacks is that it can only zoom to 100%, making it very difficult to check small details.

Even so, by "turning" all the time and effort that you have to spend on the bleaching or brightening of the previous photograph, Pearly Whites is attractive enough. If you are about to take a lot of portraits on the upcoming April 30, 2016, you should download the trial version of Pearl White completely free at http://www.imagetrendsinc.com/products/prodpage_pearly.asp.

Only you will not be able to trade these photos until you have purchased the official version, because although there are no restrictions on the trial period, the demo version will leave a seal on Image Trends Pearly Whites on Photograph.
