

# Picking rats back in the wilderness, but after a few minutes the rattlesnakes have to die in pain

After enjoying lunch, rattlesnake must die in pain under the claws of the tail eagles because it is too subjective.

After enjoying lunch, rattlesnake must die in pain under the claws of the tail eagles because it is too subjective.

1. Marvel at the rat rat hunting pigeons in the middle of the street
2. Despite being eaten by frogs, snakes still aggressively attack cats

Possessing a powerful nerve venom, rattlesnake is the most dangerous dangerous predator in America. Just one bite of them is enough to make the prey die in just a few minutes. An adult who gets bitten by rattlesnakes can be in danger, even lose his life.

Rattlesnake.

However, in the animal world full of dangerous rains, rattlesnake snakes still have to step back to the tail of fire, their natural enemies.

Falcon tail is a popular bird in North America weighing from 1.5-3.5kg, about 45-65cm high and 110-145cm wingspan. One of their favorite foods is solid.

The rattlesnake did not know that, as soon as it killed the mouse and enjoyed lunch, it itself fell into the sight of the fire tail.

From above, the fire-tailed falcon used his keen eyes to observe and wait for the snake to finish eating the meal before 'coming out'. As soon as the time comes, the tail of fire swings down to face the prey. Although rattlesnake snakes have deadly venom, but when it comes to the hard claws of the fire tail, it cannot be effective.

With agility and intelligence, the fire tail quickly ended the hunt by snatching the snake's body in its claws and inflicting consecutive strong attacks and prey heads. While the rattlesnake is still writhing in pain, the tail of cold fire uses a beak to cut its prey.

Extremely fierce wild world, those who just hunt suddenly become prey of the stronger.
