

# Picking up marine waste sorted into impressive works

Impressive works from plastic waste from the sea by artist Barry Rosenthal, to appeal to people to protect the environment, especially the marine ocean environment.

According to research results, each year around the globe about 8 million tons of plastic discharged into the ocean, equivalent to a minute a garbage truck full of plastic poured into the sea.

When collecting plastic waste on the coast of New York, artist Barry Rosenthal realized that plastic waste such as toys, bottles, wrapping paper . they lasted for a long time and only faded but were difficult to decompose. . Therefore, he decided to create a work inspired by ocean waste to appeal to people to protect the environment, especially the marine ocean environment.

Barry arranged all the garbage he collected to create impressive works and take photos. The plastic waste he arranged in the same color or in a certain layout looks very uniform and harmonious.

Here are impressive works from plastic waste on the sea by artist Barry Rosenthal, invite you to admire. Hopefully, after watching these works, each of us will be more aware and work together to reduce pollution of plastic waste.

1. How have humans been using plastic to destroy nature?
