Why is it necessary to use an anti-ulcer mattress for the elderly and sick people?

Elderly people and sick people who lie down for a long time will lead to ulcers. If not handled well, ulcers can spread quickly causing trouble not only for the sick but also for the caregiver. And in this case, the anti-ulcer air cushion is the product recommended by many doctors.

Anti-ulcer air mattress suitable for use in people with seizures, paralysis, burns, fractures or lying continuously in the postoperative process, the elderly .

The use and cleaning of this type of cushion is quite simple. In addition, it also brings high efficiency in the treatment of related diseases.

Structure and principles of anti-ulcer air mattress operation

Anti-ulcer air mattress is designed to be quite compact, simple in the process of use and installation.

The mattress section can be folded up very handy, when you use it, you can bring it into the inflatable. After pumping the buffer, it will be very smooth to help users completely comfortable and comfortable when lying down. Cushion is made from PVC material used in medical completely without smell, very safe for the health of patients.

The pump section is also designed quite simply. The on, off, and alternate buttons to adjust the inflatable mode on the camera body make it easy to use

This type of cushion is completely different from air cushion or water cushion. When the engine pump helps the vents in the cushion move continuously. Therefore the body is not exposed at a point for too long so it has an effective anti-ulcer effect.

Instructions for using anti-ulcer mattress

Step 1: Spread the mattress off the bed to pay attention so that the mattress does not have any folds.

Step 2: Put the pump fixed on the plane or hang at the foot of the bed.

Step 3: Attach the cushion to the pump through the connecting line.

Step 4: Power on the pump, this time the machine will slowly pump into the buffer. About 15 - 30 minutes, the buffer will be flat.

Step 5: Plug in the power continuously, the machine will continuously pump into the buffer, so the air flow will flow from one position to another as a massage machine helps prevent ulcers effectively.

Always keep the pump in use, with a strong engine, a strong pump volume and all the way to set the discharge time within 4 - 9 minutes cycle will be repeated once, can adjust the level of the inflatable (recommended to be up to 70% to buffer the activity to promote all features).

Note when using a slightly anti-ulcer pad

1. Do not smoke, use fire near a mattress or pump.
2. Keep away from sharp objects.
3. If used for the first time, you need to pump the buffer for about 15-20 minutes.
4. To keep the mattress clean, you can also put a really thin cloth on top.
