

Play games on multiple screens via Chrome browser

Google boasts the ability to handle HTML 5 and JavaScript on Chrome when allowing multiple devices to be used to display a game content.

Google boasts the ability to handle HTML 5 and JavaScript on Chrome when allowing multiple devices to be used to display a game content.

Three phones use the same screen for a game.

To demonstrate some of the features on the new Chrome version, Google developed a small game called **Racer** that can **run directly in the browser**. It is worth noting that the game can operate on multiple mobile devices at the same time and make group play more interesting.

Devices such as smartphones and tablets need only one initial installation to align the position accordingly. After that, screens like being combined into one and the game can be displayed on all devices. Each vehicle in the game will run from screen to screen in turn like it is operating only on one machine.

Not only images, Google said each device also acts as a small orchestra to emit sound when many users are playing.

Racer is designed simply for the main reason of demonstrating Chrome's impressive capabilities on iOS or Android with JavaScript, HTML 5.

Video game play on multiple screens via Chrome:
