

Play WiFi from your laptop easily with Connectify Hotspot

Broadcasting WiFi from a laptop will help phones, tablets can share the Internet with laptops without the need for an expensive WiFi transmitter. Here's how to play WiFi, share your Internet connection from your laptop.

You are only having one network while you need to use the Internet from different devices like laptops, phones, tablets . What to do now? Quite simply, turn your laptop into a WiFi hotspot along with Connectify Hotspot utility.

Before going into the detailed tutorial, I would like to share something about this software that can play WiFi Connectify Hotspot. Its free version is limited to many features, you can simply play WiFi from your laptop, change the WiFi access password and view / manage the device connected to the WiFi network you play. All settings are almost unnecessary or impossible. After about 30 minutes of connection, the application will stop and you must reconnect. Not to mention there is a continuous window that prompts you to update to the Pro or Max fee. I have tried quite a lot of WiFi playback applications, and this is not my favorite app, but it is quite popular. You can use ad-hoc or MyPublicWiFi, I find it much more comfortable and comfortable, there is no limit to the playback time, no pop-ups.

1. Play WiFi on super simple computers with MyPubicWiFi
2. Set up Ad Hoc wireless network on Windows 7

Play WiFi from your laptop, follow these steps:

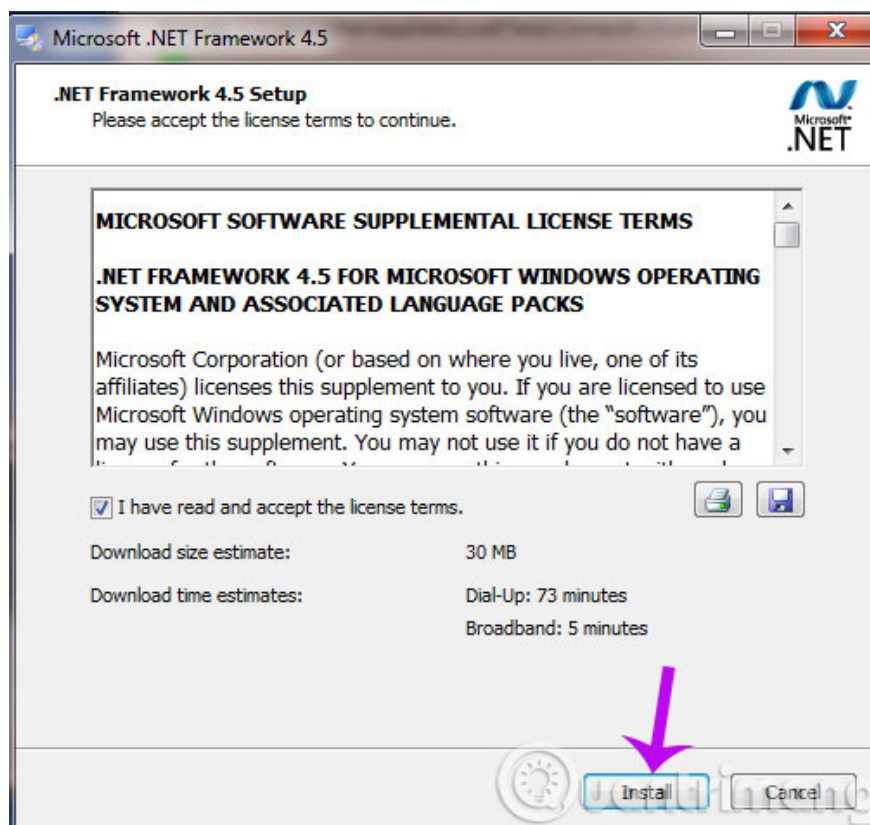

Step 1: Download Connectify Hotspot to your computer and install:

The installation process takes place, the program requires you to install Microsoft.NET 4.5 if the computer is not available, click OK to continue and proceed to install the Framework 4.5 for the computer.

After the installation process has finished, you need to restart your computer to complete the Connectify installation process.

Step 2: Open Connectify Hotspot, you will see the main interface of the application, select Start Hotspot to play WiFi

1. **Hotspot Name** : Since it is a free version, you cannot remove the other Connectify line. One point to note is that you will not be able to name the hotspot in Vietnamese with accents.
2. **Password** : You can leave it blank if you don't need to enter your password. If spending in the family and do not want to be used, you should install a password strong enough to secure your home wifi network

1. **Internet to Share** : This step is quite important for access points to access your network. You must select the correct device you are using to access the network. For those who are using ADSL or optical cable, the name of the device is usually: **Local Area Connection** . For anyone who is using 3G or wifi, it will be **Wireless Network Connection** , .

After filling in all 3 items, click **Start Hotspot** to start WiFi. If you want to see which device connects to the network you have played, click the Clients tab.
