

Plus Photo Story 2 LE: Use images instead of words

You have a collection of photos in anniversaries, birthdays, friends and you want to store in VCDs instead of glossy paper pictures. So Plus Photo Story 2 LE can help you. This is M's test program

You have a collection of photos in anniversaries, birthdays, friends and you want to store in VCDs instead of glossy paper pictures. So Plus Photo Story 2 LE can help you. This is Microsoft's test program should limit features.

However, with the functions that come with this trial panel, you can create your own VCD with live and beautiful background music with just a few simple steps.

Step 1: Start Plus Photo Story 2 LE. Click Import Pictures to insert the image. After inserting, click Next to go to the next step.

Step 2: To review the images in the order of presentation, select Preview Story. To insert the sound, select the Configure Microphone to get the program to recognize the microphone and record the audio inserted into the image. Click Next to proceed to the next step.

Step 3: insert the employee information and select the time to display the title page.

Step 4: insert background sound into the image. You can choose the volume by dragging the slider and the time. Click Preview Final Story to review the results.

Step 5: select the output format and output video quality. According to you, you should choose the default by program.

Once completed, the program will create wmv format file. You can use CD Burn to burn a presentation disc on family VCDs.

Since it is a trial version, it is currently possible to tweak the effect to see if the image cannot be used. And the program is still not really perfect in supporting the image and sound appropriately. However, with donations without advertising, the program is really interesting compared to ProShowGold or FlyVCD if you do not want to violate copyright.

Plus Photo Story 2 LE capacity 5234KB, compatible with Windows XP. Download **here** or <http://www.microsoft.com/windows/plus/tryit.asp>
