## Experience of buying cheap and economical water heater

### Choose the type of heater directly or indirectly

Choosing a direct or indirect mechanism water heater is also quite important for your family's habits and hot water usage needs. Each model has its strengths and limitations. Depending on the needs and living habits of the family, you choose the right heater.

Direct water heater is a series of machines with the mechanism of heating directly by the resistance bar, not through a container (or a very small container), so it will heat quickly almost immediately, however, it will be more suitable where there is a strong and stable power source. The device is quite compact in size and the installation is also simple and easy, however, does not save energy by indirect models.

Meanwhile, indirect water heaters have a longer heating time, large water tanks, separate water inlet and outlet lines and are able to save more electricity. A water heater can be used for many areas such as washbasins, bathtubs, etc. Can be installed in walls, save space, increase the aesthetics of the interior space.

### **Consistent with the needs of use**

Depending on the volume of hot water, the heater is divided into different levels to meet different uses of consumers. Families need to base on the need to use to choose the type of bottle with the appropriate capacity.

For example, if you buy only for personal use or for the kitchen, you should only buy a mini water heater with a capacity of less than 10l. If used for families with 1-2 people should buy 10 to 15 liter bottle. Families with 3-4 members should buy 20-30 liters. Families with 4-6 members should buy one with a capacity of over 50 liters.

Even more can choose the type of large capacity, larger capacity.

## **Choose the right power**

Normally, corresponding to the capacity of a hot water tank, there will be an appropriate power level, it also determines the level of rapid boiling of that water. The faster the kettle boils water, the higher the power consumption. Therefore, please select and consider the capacity of the jar on the specifications section to choose the most suitable type.

## **Suitable for installation space**

Determine the purpose and installation space of the family to choose the right type of heater. For example, with small or medium installation spaces such as small bathrooms, kitchens . or families with a tight area, it is suitable to install small, mini-dispenser types with compact design. . However, if your family has a large bathroom area, then you can consider buying a slightly larger capacity dispenser.

## **Pay attention to the safety mode of the jar**

When choosing to buy a heater, one factor that you should not ignore is that it is equipped with safety mechanisms when used or not? For example, the system automatically disconnects when the water is hot enough, anti-shock mechanism . to increase absolute safety when used.

## **Choose from reputable brands and trusted addresses**

One thing that should not be overlooked when buying a mini dispenser is to choose a reputable brand of a reliable distribution address. Carefully check the label and read the manufacturer's instructions before buying. Should not buy unknown place of origin, cheap, no warranty.
