

Popular types of headphones are chosen by many people today

The list of popular types of headphones today includes: In-ear headphones, External earphones: On-Ear, Over-Ear headphones, Wireless headphones

Choosing a type of headset that is suitable for the purpose of use such as listening to music, playing games, etc. without causing discomfort to the ears when worn for a long time is something that makes many people wonder. TipsMake will introduce you to popular types of headphones and suggest criteria for choosing the most appropriate headphones in the article below.

All types of headphones are available on the market today

Below are reviews of the pros and cons of the most popular **types of headphones** today, compiled and evaluated in detail by TipsMake:

In-ear headphones

The first list of headphones in '**popular types of headphones today and criteria for choosing the right headphones**' that TipsMake wants to introduce to you is **in-ear headphones**. Also known as **in-ear headphones (IEM)**, they have a quite compact design and can be inserted deep inside the ear canal. Furthermore, some new models of sports earbuds are also designed with additional wings or fins to help keep the headphones firmly inside the ear even during vigorous activity.

Picture 1 of Popular types of headphones are chosen by many people today

Advantage

1. Has an extremely compact design and very light weight, very convenient to carry with you. In particular, thanks to this compactness, in-ear headphones do not affect the user's glasses, earrings, or hair.
2. Most in-ear headphones today have microphones and control buttons integrated directly on the cord.
3. The noise canceling ability is quite good, rated by users as average to perfect.

Defect

1. The sound quality is not appreciated, especially the bass is not as good as over-ear headphones.
2. If used for a long time, it will cause ear discomfort.
3. Because it is designed with 2 long wires, it is easy to get tangled, twisted or broken during use.

Evaluation: In the list of 'popular headphones today', In-ear headphones are suitable for users who do not have high needs for sound quality or convenience. Simply use the headset to talk, listen to music or study for a few hours a day and can easily be carried to many places.

External earphones: on-ear

Continuing the list of articles on all **types of headphones available on the market today**, we cannot help but mention **external earphones: on-ear**. This is a type of headset that is quite large in size and is worn outside the user's ear. On-ear headphones also have many types, from popular quality with low price to high-end sound quality.

Picture 2 of Popular types of headphones are chosen by many people today

With a design that covers the user's ears, it can completely filter out noise from outside, but there are also headphones that allow you to both listen to the sound coming from inside the headset and hear the sound. bar outside.

Advantage

1. Compact design, light weight, does not cause stiffness or heat like over-ear headphones.
2. Some models can also be folded so users can carry them with them.

Defect

1. The noise isolation feature is not as good as in-ear or over-ear headphones.
2. The sound produced is also not good, especially for bass tones.
3. Easily leaks sound from headphones to the outside.

Review: On-ear headphones are one of the types of headphones most chosen by users today. This headphone model is relatively suitable for users who want to enjoy music at an average level or above and can take listening to many places. In addition, this type of headset is also very suitable for office workers whose work does not have much contact with customers.

Headphones that cover the entire ear, large in size: Over-Ear

If you are struggling to find one of **the types of headphones** that offers great sound isolation or rich sound, then **Over Ear headphones** are the perfect choice for you. The characteristic of over-ear headphones is that they are very large in size and can completely cover the user's ears. It has extremely good soundproofing properties, so it is more suitable for use at home or in the office than taking it out.

Picture 3 of Popular types of headphones are chosen by many people today

Advantage

1. Brings a perfect sound experience to users, including highs and basses.
2. This is a highly sound-isolating headphone model, providing absolute privacy.
3. There is no sound leakage from the speaker to the surrounding environment.

Defect

1. Very large in size and quite heavy in weight.
2. Wearing headphones for a long time will cause a feeling of heat and stuffiness in your ears.
3. Especially if you have long hair, wear glasses or a hat, it will be cumbersome and inconvenient to use.

Review: Over-Ear headphones are suitable for those whose work revolves around sound or using video making software. Or users who have high requirements for sound quality and regularly listen to lossless music (high quality music), this headphone model is the best choice.

Wireless headphones (no cables required)

Wireless headphones are one of **the types of headphones** that are connected to the device via Bluetooth, wifi, RF., without having to plug in a wire directly.

Currently, the most popular is still a wireless headset connected via Bluetooth, but the sound quality you hear will be reduced due to the file being compressed. To improve this problem, many manufacturers have equipped their wireless headset models to meet the aptX standard, aiming to improve the sound quality.

Picture 4 of Popular types of headphones are chosen by many people today

Advantage:

1. There are no wires connecting the headphones to the audio devices.
2. Audio can be streamed between the device and headphones within a range of 10m. With some new generation headphones, this distance may be even farther.

Defect:

1. The headset cannot be used continuously. If the battery runs out, it must be charged before continuing to use.
2. The audio file is compressed when played, so the sound quality will be slightly reduced.

Evaluation: This wireless headset model is very suitable for office workers or those who need to travel on public transportation such as buses, coaches, trains, etc.

Completely wireless headphones: Bluetooth True Wireless

Included in the list of 'currently popular headsets and criteria for choosing the right headset', **True Wireless Bluetooth headsets** are the most popular headsets on this list, with a cable-free design and thread-free design. There are 2 earphone buttons to fix inside the ear. This is an upgraded line of headphones compared to old Bluetooth versions that both provide excellent sound quality and are easy to use on the go.

Picture 5 of Popular types of headphones are chosen by many people today

Currently, on the market there are more and more completely wireless headset brands, such as iPhone, Samsung Galaxy, Sky Audio. More advanced headphone models such as Bragi The Dash Pro or Doppler Labs' Here One are guaranteed to bring many outstanding features to bring the most perfect sound experience.

Advantage:

1. With compact design, easy to carry with you.
2. Wireless design so when using, there is no need to get entangled or have to untangle cables.

Defect:

1. Battery capacity used is quite low.
2. It's easy to fall off while wearing it because of its compact shape.
3. Models with good features often cost more than standard wireless headphones.

Evaluation: This is a headphone model that is easy to use anytime, anywhere, especially for office work, traveling by train or participating in sports activities.

Specialized sports headphones

Sports headphones are one of the popular types of headphones chosen by many users. Currently, the sports headset market is designed with many diverse models, but the most popular is still the wireless type. Users can use headphones for running and exercising that are very sturdy and convenient.

Picture 6 of Popular types of headphones are chosen by many people today

Sports headphones are equipped with many outstanding features that other headphones do not have, such as waterproof, sweat, and dust resistant, so users can easily use them at the gym or participate in activities. outdoor movement.

There are some models that are completely noise-proof, but there are also open or semi-open models that help users hear outside noise for safety reasons.

Advantage

1. Compact, convenient and easy to carry with you.
2. It is very sturdy when worn on the ear and does not easily fall off like regular in-ear headphones.
3. Specifically designed for use in fitness and sports activities with extreme water and sweat resistance.

Defect

1. There are a few models with open designs, so it's quite inconvenient when the surrounding noise is too much.

Evaluation: Specialized sports headphones are only used during sports activities. Very poor effectiveness if used in the office, on the train or in crowded places.

Completely noise-canceling headphones

The next headphone model TipsMake introduces in the list of **popular headphones today** is a completely noise-cancelling headphone. This is a product line equipped with the most advanced noise canceling technology, helping you eliminate noise from the outside environment without having to turn up the volume to max.

However, it does not mean that outside sounds will be completely eliminated, such as the sound of air conditioning, car engine, etc.

Noise-canceling headphones also come in many types from in-ear, on-ear to over-ear. When you don't need to increase the volume to reduce noise, it will help you avoid ear pain and you can also easily hear the bass sounds coming from inside the headphones better.

Picture 7 of Popular types of headphones are chosen by many people today

Advantage:

1. Thanks to effective noise cancellation technology, you can easily use it on the plane, work in your personal office or go to work in the morning.

Defect:

1. Noise cancellation can reduce the natural sound of music.
2. There are many cases where users use noise-canceling headphones for too long, leading to feeling nauseous.

Evaluation: Very suitable for users who need a quiet space to work and study. Easily eliminate ambient noise without having to invest in expensive over-ear headphones.

Lightning or Type-C headphones

The last headphone model in the article 'popular headphone types today and criteria for choosing the right headphone' that TipsMake introduces to you is the **Lightning or Type-C headphone**. The characteristic of these headphones is that they do not use the usual 3.5mm jack plug, but instead use a Type-C or Lightning port to connect to mobile devices.

Advantage

1. Can connect digitally directly to the device to provide more standard sound quality.

Defect

1. For many incompatible devices, an additional adapter will be needed to plug into the standard 3.5mm jack.
2. Uses more battery on mobile devices than regular wired in-ear headphones.
3. The price is also much more expensive than other popular wired headphones.

Evaluation: Lightning or Type-C headphones are suitable for users of iPhones or smartphones using the latest Android operating system who want to have a digital audio experience.

Thus, TipsMake has just evaluated and listed the most popular types of headphones on the market today. Hopefully, with TipsMake's objective reviews, you can choose the most suitable headphone model for yourself. However, if you still don't know which headphone model to choose, don't worry, continue following Huy Khang's article in the article below.

Some criteria for buying the right headphones for you

Below are some criteria you can refer to when choosing to buy headphones, from which you can choose the headset that best suits your needs:

Price

Usually the price of a headset will be proportional to the sound quality. Therefore, depending on your financial conditions and usage needs, choose the type of headset that best suits you.

However, you don't need to choose expensive headphones that you use several times a month or expensive sports headphones that you only use to listen to music at home.

In addition, most over-the-ear headphones are also much more expensive than earbuds, but in return the sound quality is better. To avoid losing money unjustly, choose reputable stores on the market to buy genuine headphones. Do not choose unknown stores to avoid buying fake, counterfeit, or poor quality goods.

Bass sound

Bass, also known as bass tones, is one of the main factors that directly determine the good or bad of a song. There are many manufacturers that adjust the sound characteristics of their headphones to emphasize low-frequency sounds, in order to increase the price of these headphones on the market.

Over-ear headphones will often provide better bass than other headphone models.

Noise canceling ability

Depending on your needs and purpose of using headphones, you can make the appropriate choice. With closed-back headphones, you can block out all outside noise better than in-ear headphones. In particular, noise-canceling headphones are often preferred.

Open headphones will allow you to hear outside sounds such as car horns, phone calls, etc. Normally, users use closed headphones when at home or need a private space for themselves. close and don't want to be bothered by others.

Open headphones are very suitable for outdoor activities or participating in traffic and want to know what's around you to ensure your own safety. However, there are some brands that will make sound come from inside the headphones so that anyone standing next to you can hear what's playing.

Picture 9 of Popular types of headphones are chosen by many people today

Longevity

The material that manufacturers use for headphones will determine the durability of the product. When you choose headphones, you also need to pay attention to whether the product can be folded, whether the materials

used are durable and sturdy, whether the connection points are carefully designed, etc.

Feeling when wearing

Each headset when purchased will usually come with many cushions to help fit the user's ear structure. However, you should also try on the headset to see how comfortable it is. Do you feel pain in your ear, is there any heat or sweat in your ear, etc.

Most cheap headphones often use hard plastic materials that cause ear pain, heat, and directly affect the user's health.

Cable and jack length

Most audio headphones are designed with only a single cable and is attached to the left earphone, also known as a single-sided cable. However, there are some newer models of headphones and all types of in-ear headphones will use a Y-shaped cable that connects directly to both sides of the headset (double-sided cable).

At the same time, there are usually two main types of cable jacks: straight jacks or L-shaped jacks. L-shaped jacks will be suitable for devices with connection ports on the side or bottom.

Depending on where you place your music player, you can choose the length of the headphones. However, you should choose long cables because if you don't use them you can still shorten them, but with short cables you cannot extend them when needed.

Epilogue

Above is information about the most popular types of headphones on the market that you can refer to. Hopefully this TipsMake article has helped you choose the right headphone model for your needs.
