

Pouring salt into Coca obtained results that surprised everyone

As soon as the salt was released, the Coca Cola bottle immediately reacted quite violently, surprising many people.

CrazyRussianHacker, a YouTube account posted a video recording the unique testing process of putting salt into a Coca Cola bottle. Immediately, the Coca Cola bottle reacted quite violently that many people were surprised.

Check out the video below to find out what happens when you drop salt into a Coca Cola bottle.

Since the Coca Cola bottle has CO₂ gas compressed into the bottle when it is made to produce gas, when feeding salt (with the main component of NaCl is better than CO₂), CO₂ will be pushed out of the bottle as balloons.

1. What happens when mixing Coca Cola with bleach?
2. What happens when we take medicine?
