

Predator Thronos, the unique gaming chair that supports three screens, can vibrate rotation

Manufacturer Acer has brought to IFA 2018 an innovative design gaming chair called Predator Thronos. This chair can simultaneously mount three 27-inch screens and a Predator gaming computer.

Manufacturer Acer has brought to IFA 2018 an innovative design gaming chair called Predator Thronos. This chair can simultaneously mount three 27-inch screens and a Predator gaming computer.

In addition, this 1-0-2 chair also has a fairly large space for gamers to be comfortable fighting games for a long time. Even the chair has the ability to vibrate according to the game and tilt up to 140 degrees, the LED lights on the chair are light up when people sit in to enhance the game experience for users.

This unique Predator Thronos chair has a steel structure, 1.5 meters high and weighs more than 220kg. Overall, Predator Thronos looks like a giant computer and doesn't look like a chair.

Price and date on the shelf of this chair has not been announced by Acer.

At IFA 2018, Acer also introduced a series of 27-inch dedicated gaming monitors, matching Thronos seats.

The most prominent of which is the Predator XB273K screen using IPS panels, 144Hz refresh rate, 3840x2160 resolution, support of NVIDIA's G-Sync technology to eliminate shearing, reducing eye pain when Play games for a long time using Acer VisionCare software. Preadator XB273K is priced at \$ 1,299 and will be sold in North America in the fourth quarter of 2018.
