

# Prepare for your baby: 5 ways to get children interested in programming

If you want to prepare your 'preschool' generation for an early future, then you should definitely consider the area of ??the most exciting, creative and rewarding activity of the 21st century right now - That is programming.

If you want to prepare your 'preschool' generation for an early future, then you should definitely consider the area of ??the most exciting, creative and rewarding activity of the 21st century right now - That is programming.

Today, many parents have started giving their children access to programming right from the elementary level. Familiarizing yourself with early programming will help children learn many interesting things such as how to test new ideas, how to divide complex ideas into simple tasks, learn how to cooperate with others for real. Currently the project, learns how to find and fix errors when the results are not satisfactory, practicing perseverance in the face of difficulties . not only stopping there, children learning early programming also help the child's brain more active, more logical thinking.

So, in order to help children develop a more sensitive mind and play while learning, consider these 5 interesting ways to bring children into the world of programming languages.

## 1. Invest in technology equipment

In this day and age, it is not an overstatement to say that children grow up with technology, with tablets, smart phones, smart wearable devices and soon get to know things like these. Unmanned vehicles or robots that support people. In particular, some robots are now able to teach children block-based programming and connection applications such as Sphero SPRK Robot.

So, you can **invest in GOOD technology for children**, they will find for themselves the technology they love, will be curious about why their interests work, programming languages. basically create those technologies.

## 2. Choose for your child an interesting programming course

An interesting code course can be immediately exciting for children, and often such early interests are not entirely temporary.

The truth is that children always want to explore their hobbies, want to be able to play and overcome challenges at the same time. So it is important that you allow youngsters to try an entertaining coding platform designed specifically for children.

### 4. Have children participate in technology summer camps

Children love to go to a summer camp for more useful things, but if your little friends are interested in coding and programming, you can **encourage participation in coding bootcamp for children.**

Technology summer camps have started to become popular in Vietnam and you will easily find information online. Such an interesting and rewarding trip will provide you with an attractive environment to create creativity, train confidence when sharing ideas and direct to a common community for learning programming right away. from the age of students.

## **5. Show your child the wonderful things about programming**

If you are a programmer, taking a child to work is not a bad idea, let your child see great things as a developer. In addition, you can take your children to areas with large technology companies or show them videos about the great work environment of Google or Apple.

Programming truth will be one of the most interesting jobs in the future. Many agree that studying and working with code is one of the most essential areas of activity in the future.

So you can soon prove to your child the joy and satisfaction of being able to create great systems and applications that will make them more happy and interested in programming.

In general, if possible, you should let your children be creative and discover their interests in programming, and if lucky, they will soon find the language that suits them. The programming world is great, you don't need to force your child to see it, let them feel for themselves.
