In order to find wind **breakers, wind blowers in Hanoi** and Ho Chi Minh City, please refer to the article below. Our suggestions below will definitely help you find the most satisfied and satisfied wind cutting fan.

What is a wind-proof fan, wind-cutting fan?

Wind-breaker fans, also known as wind-blow fans, are similar in design to air conditioners. They are used to install at the door of the mall, supermarket, restaurant, . or in some families.

Unlike air conditioner when the operation requires closed space, the wind-cutting fan when used again does not need to close the door.

Why is that? Let's find out later in this article.

What is the effect of wind-blow fans and wind-blow fans?

In trade centers, supermarkets of people going in and out are counted by hour and every minute. Therefore, closing is not feasible. However, the space inside must still be airy so they still use air conditioning.

Sounds a bit strange, does opening the air conditioner not close? This is the time to let the wind-cutting fan work.

Installed right at the entrance. This windscreen fan acts as an invisible invisible door:

1. Prevent outside air flow from entering the internal environment. External airflow is quickly blocked by a strong airflow from the air blower at the door.
2. As a result, smoke, insects, and harmful agents from outside cannot get inside.
3. The space inside is always guaranteed to be cool and pleasant.
4. Even if the door is open and the air conditioner operates, it will not affect the cooling effect as well as the power consumption.
5. Windshield fans can also attract polluted air inside and out, to ensure the safest for human health.

Principle of operation of wind-cutting fans and wind-breakers

Inside the device is a squirrel-cage centrifugal fan along with a large flow of air blowing to help the fan exert its full effect, effectively preventing outside air from entering.

The fan is designed with 1 inlet and 1 air outlet, comes with a remote control to bring convenience to users.
