

Print better from the web

This knowledge will help you better print with settings from the current popular web browser, Internet Explorer and Mozilla Firefox.

This knowledge will help you better print with settings from the current popular web browser, Internet Explorer and Mozilla Firefox.

Mozilla Firefox browser

After you have entered the web page containing the information you need to use to print the document, go to **File > Print Preview** menu. Then, by default, the print page will contain information about the title, the URL address information . On the first page, select **Page Setup** to set how to display the printed page (image).

In the **Margins & Header / Footer** section, the **Margins** section gives you the option to leave margins through top, bottom (bottom), right (Right) parameters. However, you should pay attention to the **Headers & Footers section** . There are three sections in the way shown as Left (left), Center (center), and Right (right). Depending on the display, you can select the appropriate parameter.

Internet Explorer browser

The trick on the Internet is a little different with Mozilla Firefox. Once you have reached the website that contains the information you need. Go to **File > Print Preview** menu. Next, select **Alt + U**.

In the **Paper** section, you select the paper size to use (usually A4). The **Source** section selects **Default Tray**. The **Header** and **Footer** sections you delete are blank. The **Margins** section lets you choose the size to leave. After setting, click **OK** to finish.

In some cases the website contains information that is too long and you only need to print a page or a few pages, you can use the following tip:

After waiting for the page to load the content completely. You press **Ctrl + P** (applies to both Mozilla Firefox and Internet Explorer). Then, for Mozilla Firefox, select the page you want to print in the **Print Range** section, you bookmark the **Pages From** section (**To the** first page number) **To** (the last page number).

As for Internet Explorer, you select the page to print through the interval mechanism. For example, if you need to print pages 2 through 5, you can enter 2-5 content into Pages in the **Page Range section**.
