

PrivaZer - System cleanup and junk file deletion

Computer systems that have been running for a long time can easily become sluggish. PrivaZer is a necessary utility to help clean up the system and delete junk files on your computer, freeing up memory space and speeding up your computer's performance.

PrivaZer is a free application that helps you optimize your system, clean up, and delete unnecessary files. In addition, PrivaZer supports scanning in various locations such as: external hard drives, USB drives, etc.

Guide to cleaning up your system and deleting junk files using PrivaZer

To use PrivaZer to clean your system, you need to download and install the software on your computer. If you don't have it yet, you can download the latest version of **PrivaZer**.

Step 1 : Open the program after successful installation. By default, the program will select "**Scan in-depth**".

Step 2 : Select the device you want to scan in the "Which device" section. Then press **OK** to confirm and proceed to the next step.

Step 3 : Select the drive you want to scan; check the box next to the drive you want to scan.

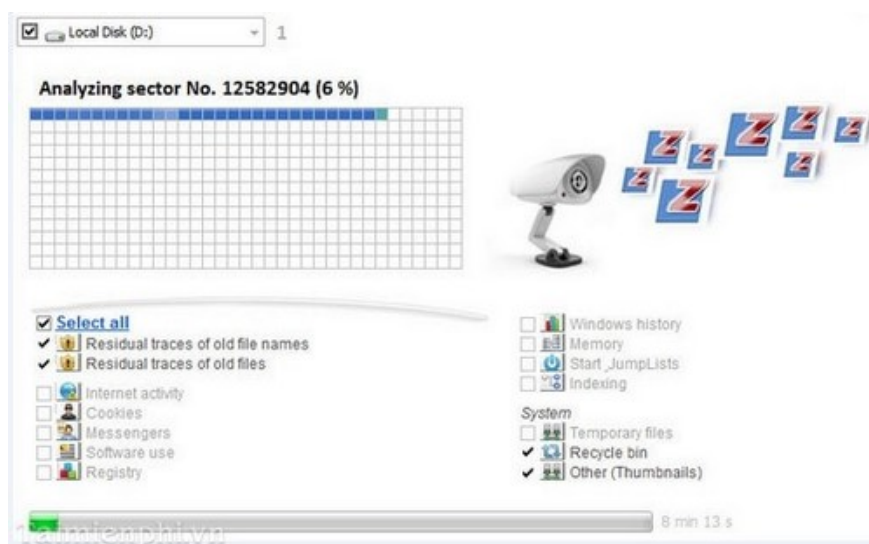

Step 4 : Next, select the type of file you want to scan and check the box next to it.

Check the "**Start cleaning**" box if you want to remove all traces once the scan is complete without further action, and check the "**Shutdown PC after...**" box if you want to shut down the computer after the scan is finished. After setting the parameters, press "**Scan**" to begin the process.

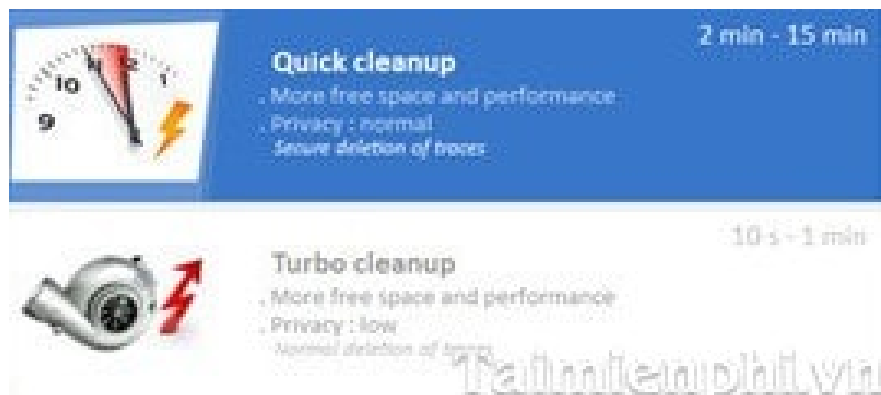

The scanning process is underway, and it's taking quite a while.

Step 5 : Wait a while after the process is complete. If you didn't select "**Start cleaning**" earlier, after the scan is finished, press "**Clear**" to delete and clean up the scanned system files.

You choose the delete mode.

Next, wait for the process to complete. You can then minimize **PrivaZer** to your tray to do other work. Once finished, click **Close** to close the window.

Overall, PrivaZer is a powerful and effective system cleanup tool for deleting junk files. After using PrivaZer, the free disk space increases significantly, making the computer run much faster than before. Additionally, if you're not satisfied, you can try one of the other tools available in TipsMake.
