

Programmable application for Gear wearable devices

Samsung has announced the SDK package for developers who want to program applications for Gear 2, Gear 2 Neo and Gear 2 Fit wearable devices.

Samsung has announced the SDK package for developers who want to program applications for Gear 2, Gear 2 Neo and Gear 2 Fit wearable devices.

This SDK package can work on Windows, Mac OS and Ubuntu systems. So from this point the programmers were able to participate in writing their own applications for Tizen-based devices.

At MWC 2014, Samsung introduced the new three-gear **Gear 2**, **Gear 2 Neo** and **Gear 2 Fit** to run the Tizen operating system backed by the company, not Google's familiar Android operating system as on devices. wear predecessor. This shows that Samsung is also trying to get rid of its dependence on the Android ecosystem on its devices and proceed to build a separate ecosystem for the company.
