

# Proton Sheets Launches: An Encrypted Spreadsheet to Replace Excel and Google Sheets

Proton introduces Proton Sheets – an end-to-end encrypted spreadsheet tool that supports collaboration, formulas and charts, works like Excel and Google Sheets but is more secure and free.

Proton is already known as a privacy-first technology company, with a variety of services such as VPN, secure email, cloud storage, password manager, authentication app, AI chatbot. And now they continue to expand the ecosystem with Proton Sheets - an end-to-end encrypted spreadsheet tool, aimed at users who want better data protection than Excel or Google Sheets.

There's a joke that the world runs on Excel files. And that's... not far off. Countless businesses and industries rely on Excel or Google Sheets every day. Proton believes it's time for a more secure solution that won't be fed data to AI training, won't be tracked, and won't be leaked. The company even cites Google's official support document, which advises against *putting* sensitive data in Sheets, as it could be used to train Gemini or accessed by human moderators.

According to Proton, Proton Sheets is easy to use, supports teamwork, calculation formulas, data analysis, charts. like Excel or Google Sheets. All are end-to-end encrypted by default, ensuring that only the user can view the data. Proton Sheets also supports XLS and CSV formats, allowing users to bring all old files over and encrypt them immediately.

Like many other Proton services, Proton Sheets is completely free. All you need is a Proton Drive account. With this addition, Proton is gradually completing its suite of alternatives to Big Tech like Microsoft or Google, including Proton Mail, Drive, Docs, Sheets and many more.

You can see more details in Proton's official announcement post .
