

# PUBG Lite player configuration on computer, laptop

This article will help you build the configuration to play PUBG Lite on your computer

PUBG Lite is not much different from the PlayerUnknown's version of the Battlegrounds, from sound, effects, images, gameplay . only the graphics are somewhat relieved compared to the main version of PUBG so PUBG's configuration Lite is not as demanding as the original. Below is the configuration of playing PUBG Lite on the computer.

1. Configure PlayerUnknown's Battlegrounds on the computer
2. Standard tips in PUBG Mobile
3. Ways to write special characters in PUBG Mobile

## 1. Configure at least PUBG Lite to play on the computer

1. **Operating system:** Windows 7 64bit or more
2. **RAM memory:** 4GB
3. **Processor:** Intel Core i3 2.4Ghz
4. **Graphics card:** Intel HD 4000 graphics
5. **Free hard drive capacity :** 4GB

## 2. Configuration recommended playing PUBG Lite on the computer

1. **Operating system:** Windows 7 64bit or more
2. **RAM memory:** 8GB
3. **Processor:** Intel Core i5 2.8Ghz
4. **Graphics card:** AMD Radeon HD 7870 or Nvidia GeForce GTX 660
5. **Free hard drive capacity :** 4GB

For an easy-to-breathe configuration like this, hopefully you will build a reasonable PC case to join PUBG Lite on your computer.
