

Put your phone in a bucket of rice to dehumidify someone who is in a more dangerous situation

This guy put his smartphone into a bucket of rice to absorb moisture after accidentally dropping it into the water. After taking it out, he was surprised to see a grain of stubborn rice that didn't know where it was stuck in the charging slot.

Frequent incidents with personal phones are unavoidable, the most common are bumps and water. Most high-end smartphones are now equipped with water-resistant technology but moisture is not certain, so to completely eliminate the risk many people often use other moisture absorption measures. One of the most popular and easy-to-carry ways for word-of-mouths is to put the machine into a rice barrel.

However, this measure is not always effective, even in some cases it causes bad crying situations like the guy below.

On a large group discussing technology quite large in Vietnam recently appeared a post of a guy with content thanks to people "intrigue" help to escape a difficult situation. Specifically, this guy put his smartphone into a bucket of rice to absorb moisture after accidentally dropping it into the water. After taking it out, he was surprised to see a grain of stubborn rice that didn't know where it was stuck in the charging slot. Although he did everything, he still could not take out the grain.

Based on the image he uploaded, it is possible to guess that this is a Galaxy S6 or S7 Edge, so it is definitely water resistant under certain conditions. So, putting the phone in a rice bin for dehumidification is just the final safety measure.

Responding to this guy's call for help, many useful tips were given by viewers such as tweezers, needles (small grains of rice) . Some people even joked that " *put the phone in a pot cooking, self-carving rice will soften into rice and take it out easier* " .

Smartphone water is no longer a "terrible" fear like in the past thanks to the technology of water resistance.

Should I put the phone in the rice bin to absorb moisture?

Putting the phone into a bucket of rice to absorb moisture is one of the long-spread experiences. However, according to the experts' recommendations, users do not necessarily have to put the phone into a rice bin when the phone unfortunately falls into the water because it may contain unpredictable risks. In the rice bin containing a lot of tiny bits of rice scattered around, it was small enough to get into the many openings on the camera body that users could hardly detect. They may be stuck in the machine for many years, which can affect the quality of components such as speakers, contact plug ports .

Instead of putting in a rice bin, you can try other methods such as a dedicated dehumidifier, put in a sealed container with a hygroscopic grain pack .

1. It's time you should cover the phone's front camera and this is the reason
