

Questions you often ask when choosing to buy wrist watches

Which brand watch is best to buy? What is the good material for watches? ... These are the common questions when you choose to buy watches. Don't wonder, read the article below immediately.

A watch to watch hours, make fashion accessories or show class will be a bad choice for gentlemen. However, do not expect any watches with high price and quality. If you want to know which product you should choose the best, you can consult the frequently asked questions and explain below.

Frequently asked questions when choosing to buy wrist watches

1. Which brand watch should you choose best?

This is difficult to say because even watchmakers cannot give an accurate judgment. According to my experience, the Casio brand watches are trusted by the brothers. If you want to buy a watch for your person, you can choose the Julius watch. This type of design is quite beautiful and diverse, the price is also affordable, not much thought.

2. What is the cost of the clock?

Expensive watches mean confirming the position of its wearer in society. Many technical people choose watches because of their brand names. The price of watches depends on brand, features and accuracy or is simply the

amount of precious metal used to make it. In general, the price of a watch depends on many factors. You can consult to choose products that are suitable for your pocket and needs.

3. Should you choose mechanical watches, automatic watches or electronic clocks?

According to a recent study, electronic clocks often run more accurately than others. But if you own a mechanical watch, you will become cool in the eyes of other gentlemen.

In fact, the accuracy of the electronic clock will not affect your life much unless you need an accuracy of one thousandth of a second. However, the electronic clock has the advantage of being cheaper, so over a long period of time has made the watch companies wobble.

4. Why is mechanical watch expensive?

Simply because its production cost is higher due to more details. Mechanical watches require very meticulous techniques and should certainly require experienced and technically skilled watchmakers. Both of these things, you know, are not cheap!

Mechanical watch materials can be: gold, precious stones and more expensive special metals. The warranty of these children is complicated because there are more details, the distribution system is smaller in number so the cost will be higher.

5. Which watch face is the best material?

1. The glass is usually made of synthetic plastic, easily elastic and scratched but very easy to polish and renew.
2. The elongated glass surface has good water resistance, it is more difficult to scratch but if it is scratched, there is only a new replacement.
3. The best scratched sapphire surface but the price is also considered the most expensive.

With the above information, you can refer to the selection of materials suitable for your pocket and needs.

6. What is the good wire and case of the watch?

For current high-end watches, the watch wire and case are usually made of stainless steel, which is durable and has a long life. As for the types of watches with low value, counterfeit goods and imitation goods, the watch wire and shell are usually made of plated steel so it does not guarantee durability, prone to rust and metamorphosis.

People with salt sweat or working in harsh environments should not wear this type of watch and wire. Currently, some new materials are being used to make watch wires and shells like Titanium. This material is super durable, super light, not oxidized, people with allergies to metal or steel plating can be used.

7. What type of watch is the usual?

Currently, the most popular watches are Swiss or Japanese machines. Small numbers are Chinese machines (often falling into low value lines). Clockwork after a period of use often encounter some problems such as running fast, running slowly or deadly (at run time). These problems may be due to a low battery, a crashed or impacted clock that affects the circuit and the mechanical unit of the machine. If you encounter any of these problems, go to reputable service centers so that they can determine the exact cause and have a plan to fix it.

8. What about water resistance?

Usually we can only prevent water from getting inside the clock. This means that it is water resistant, but it cannot guarantee that the watch is still running when the water is inside. According to the US Trade Commission, watch advertisers are not allowed to advertise their products as 'Waterproof' even if it is a diver's specialized watch.

Reference: Is 3ATM waterproof watch worn when bathing?

However, some firms still have such suggestions on the case that many people misunderstand. The water meter reading unit of the watch is printed or engraved on the watch is M (meters). Other signs may be Bar or ATM (only the pressure in the water that the wristwatch can withstand).

Each Bar or ATM is equivalent to:

1. 10M - 50M: worn during normal swimming.
2. 100M: worn when diving (of course not too deep).
3. 200M: you can dive to a depth of not more than 40m
4. 1,000M: only in professional diving watches, with special gaskets and helium exhaust valves
5. 10,000M: there is never a type of watch that is so deep in water. Or the watch you're holding is a fake or someone is kidding you!

9. How long does a watch battery last?

For Quartz watches, batteries are one of the most important factors affecting the quality of watches. If the battery is good, the watch will run stably and use for a long time. Currently, watch batteries often have 2 to 3 years of use. Particularly some types can take up to 5 or 8 years.

However, we must understand that battery life is calculated since the manufacturer charges the battery to the clock, not from the time the consumer buys it for use. Therefore, there are some cases that have just been worn for 3 or 4 months and have run out of battery. In this case, you will be replaced with a new battery for free if the

watch is still within the warranty period.

10. How to choose a suitable watch size?

In the past few years, the trend of wearing large watch face is fashionable and very trendy. However, you also need to keep in mind some things. The general rule is that lugs should not exceed the width of the wrist. As long as the lugs are still in the wrist is safe. The watch will become more fit. If the lugs exceed the wrist, the watch will become too big and cause discomfort when viewed. Especially when choosing watches for women.

11. Can women wear men's watches?

First, there are three types of watches: men's watches, women's watches and Unisex watches. Unisex watches are watches when men wear to be men's watches and when women wear they will become women's watches. Currently, the trend of women's watches with men's watches is increasing.

Men's watches are usually not so flashy, but rather simple and compact. For women who are passionate about simplicity, these men's watches are quite attractive and interesting. Another common reason is that men's watches have large dials, large case design and many women are attracted by this factor.

12. How to choose a strap to fit?

Still a basic question that many people often ask when buying a genuine wristwatch like. It is important for a watch, regardless of what kind of strap is made of the material, fit the wrist is essential, not too tight nor too loose. If you don't want them to just slide down under your arms or limit blood circulation.

The ideal location to wear a beautiful watch is just below or right in the wrist. This is where the watch will become the most beautiful, expressing style and adding fashionable features to the whole outfit of the brothers.

To bring out the fit and comfort, make sure that the watch strap is the right size. Leather strap is usually easier to adjust, convenient metal wire for cutting or adding eye watches to adjust the appropriate length.

Tell you a number of addresses to buy genuine watches

In addition to the above factors, it is also important to choose a reputable purchase address to ensure the quality of a watch. Because now many brothers buy fake goods, counterfeit goods are very often. If you are wondering, you can refer to some of the addresses below:

Hanoi: No. 56, Pho Duy Tan, Dich Vong Hau, Cau Giay
Hotline: 024.35.68.69.69

Ho Chi Minh City: 716 - 718 Dien Bien Phu, Ward 10, District 10
Hotline: 028.38.33.33.66
