The default Windows desktop is too boring, the icons are tasteless and do not satisfy your vision? So why don't you redesign it in your own style? **Rainmeter** - the interface customization application will help you do that!

In fact, even on Windows 10, you can also tweak some elements on the Windows interface. But compared to the Gadget tool that was very successful on Windows 7 or Windows Vista, setting themes on Windows 10 makes us extremely disappointed. It can only help us change the wallpaper, set the default color or switch to Darkmode. For those who are picky and passionate about uniqueness, that is completely not enough. With Rainmeter, you can do much more!

In addition to the final version of Rainmeter with many upgraded features, you can also use the beta version completely free of charge, which still has all the necessary tools to help you customize your desktop screen in the most unique way.
