

# Ranked 25 fastest gaming laptops

Here are the gaming laptops that have been tested and offer the best 3D performance last year.

Playing games on laptops is no longer as annoying as it used to be. The compact design and powerful processor and graphics card make it possible for laptops to 'perform' as much as desktop computers.

The speed of development has not stopped when only last year, laptops also support virtual reality headsets such as Oculus Rift and HTC Vive. The new design can fit in horrible graphics hardware into the slim body like the Asus Zephyrus 17mm, which is currently the thinnest laptop with Nvidia GeForce 1080 GPU.

1. There are 10 million self-build PC's while playing good games
2. Build your own awesome gaming machine like PlayerUnknown's Battlegrounds

## Test gaming laptop

All laptops with discrete graphics hardware in the last 12 months have been tested and evaluated based on 3D performance. When testing games on a laptop or desktop, previous tests use games like Deus Ex: Mankind Divided, Bioshock Infinite . along with benchmarks like 3DMark, designed to evaluate the computer's ability to render 3D graphics. .

On this list, the laptop is ranked according to 3DMark's score, but the actual game score (shown on the number of frames per second that the laptop can render) matches the result. Keep in mind that these points are based on the exact configuration of the laptop being tested because most have a lot of configuration options.

## And the winner is .

The results brought some surprises. Many laptops with dual video cards (dual video cards) (very rare for laptops) climbed to the top, followed by laptops with a Nvidia 1080 GPU . At the top is the most expensive laptop ever reviewed, the Acer Predator 21X \$ 9,000 price. With more affordable prices, Asus, Alienware, Origin PC, Lenovo, HP, MSI and Razer are also present.

*The best laptop image to play Acer Predator 21X game*

Since many regular laptops are also tested with gaming laptops, the final list is also for laptops in the middle (interference between regular laptops and gaming laptops) with Nvidia and AMD GPU not real. gaming. Players who play seriously should choose the machine that at least has Nvidia 1050 graphics card.

Below are the gaming laptop rankings rated by CNET Labs.
