

# Razer launches Junglecat 'cool' mobile gaming controller with many advanced features

Razer Junglecat allows mobile gamers to continuously operate with extreme precision.

To keep gamers from waiting, today, October 30, Razer officially announced Razer Junglecat, a gaming controller specially designed for Android smartphones with loads of interesting features. .

With 2 traditional analog thumbstick keys, bumper buttons, 4-way D-Pad on the left and 4 extra action keys on the right, Razer Junglecat allows mobile gamers to be able to work continuously with Extremely accurate, while ensuring ergonomics, and not obscuring visibility at any angle.

However, the most prominent element that Razer equipped on Junglecat is the ability to operate in two different usage modes: mobile and desktop. When compatible with mobile devices, you can attach one or both parts of this controller to a specially designed case, allowing you to play games with your smartphone at any where. In addition, you can also attach the Razer Junglecat to the control clip and use it as a handheld controller compatible with all Android devices.

To play desktop games, you can pair your Junglecat controllers with a compatible Windows PC. Besides, Junglecat can also be paired with certain TV models and monitors, as long as the device runs on Android operating system and supports video data export.

Battery life is also a strong point that cannot be ignored on Junglecat. With just one full charge through the USB-C port, the device can provide over 100 hours of continuous use. Not only that, Junglecat uses low-power

Bluetooth technology with the ability to meet the optimal latency, helping players get the most seamless experience while the battery life is guaranteed.

You can use the Razer Gamepad App to customize the settings on Junglecat to personalize the gaming experience to your liking.

Some requirements for Razer Junglecat compatible devices include:

1. Android 7.0 Nougat and above
2. Windows 8.1 and above
3. Bluetooth compatibility

Some requirements for the Razer Gamepad App:

1. Android 8.0 Oreo (or higher)
2. Internet connection
3. Bluetooth low energy (BLE)
4. Position (to control pairing)
5. GPS (to control pairing)

With a price of only \$ 99.9, Junglecat seems to be a good value for money in the booming mobile game market.
