

# Real photos of Apple's latest iPhone X / iPhone 10

In the event of the launch of Apple's new product last night, iPhone X was the name that many people expected. It is the true successor of the early iPhone, with its splendid style, premium materials, great power and intelligence for a handheld device.

In the event of the launch of Apple's new product last night, iPhone X was the name that many people expected. It is the true successor of the early iPhone, with its splendid style, premium materials, great power and intelligence for a handheld device.

Apple has revealed a 5.8-inch smartphone is an important part of a series of new announcements about the product.

Yes, there's a pair of new iPhone 8 devices and they have their own distinct charms, at least of which is a price lower than the iPhone X 999 (called iPhone 10), but also includes glasses on both sides and wireless charging.

However, when you touch the Apple iPhone X, open the sale on October 27 and deliver from November 3, you'll notice it is something else.

iPhone X is the future of Apple smartphones.

Realistic image of iPhone X or iPhone 10. Super Retina Display OLED display (it is simply the best, best Retina display), bright, brilliant and rich colors. It also covers almost the entire front of the machine and around the front camera, looking like a smooth honey layer on a cake.

The physical Home button is no longer available, you will have to use gestures to manipulate the machine. Power and volume buttons on both sides. You will have to swipe from the top down (left side of the front

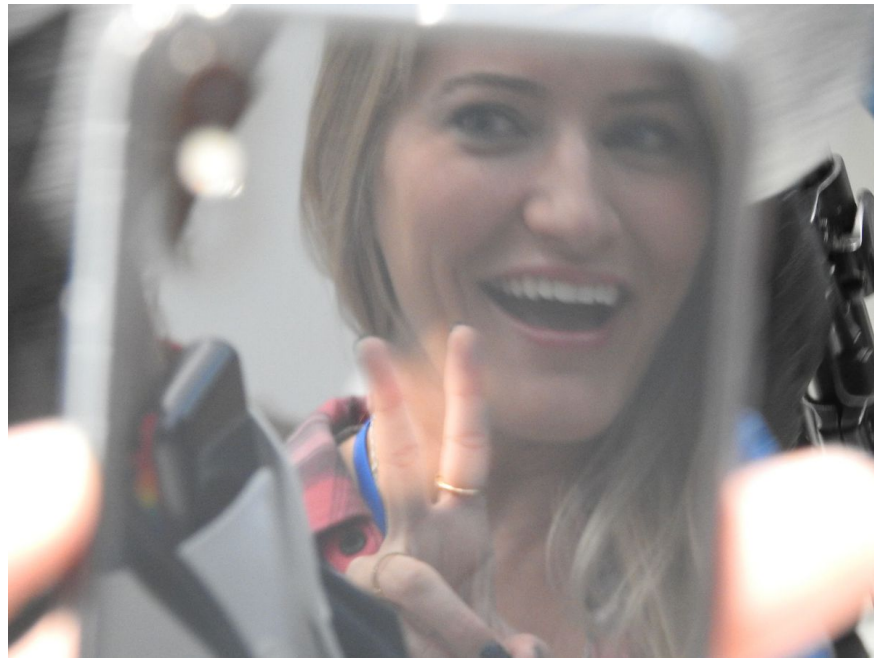

camera) to open the Control Center. Quite similar to current Android devices.

iPhone X has only 2 colors black and white.

Mirror surface is shiny, can mirror the mirror too.

This screen reminds me of the Android Phone's Essential Phone launched last month.

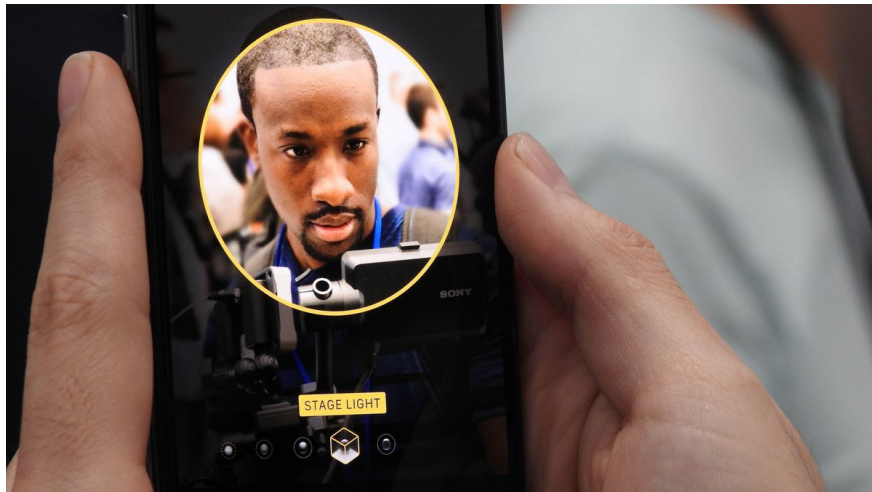

Overflow screen of iPhone X when playing games.

Picture 6 of Real photos of Apple's latest iPhone X / iPhone 10

The camera of the iPhone X has been improved, the rear camera is a dual camera, 12MP, all with optical anti-shake. Advanced Flash helps to capture images at night, in low light conditions, still very beautiful.

The front camera of iPhone X is very good for selfie needs.

Only Lightning port, no 3.5mm headphone jack, no USB-C port. iPhone X uses wireless charging.

Most impressive is the ability to detect and recognize the face of TrueDepth camera system on iPhone X. With powerful tools and technologies such as TrueDepth sensor, new, powerful A11 Bionic CPU and even Neural Engine, you have Can create emoji according to the movement of the face, accurate to small details. This system helps FaceID become more impressive, accurate and safer. Whether wearing a hat, changing a hairstyle, shaving doesn't affect your use of FaceID to unlock the phone. The percentage of people who can open your phone when using FaceID is only 1/1000000.

### Configure iPhone X / iPhone 10:

1. Screen: OLED TrueTone 5.8 inch, 112x2436, supports HDR10 and Dolby Vision
2. CPU: Apple A11 Bionic
3. GPU: Apple designed it
4. RAM: 3G
5. Internal memory: 64GB / 256GB
6. Rear camera: 12MP dual camera (20mm f1.8 OIS + 56mm f2.4 OIS)
7. Front camera: 7MP 32mm f1.8
8. Connection: ac WiFi, Bluetooth 5.0, NFC (only for Apple Pay) and Lightning
9. Security: FaceID and TouchID
10. Operating system: iOS 11
11. Battery: Supports Qi standard wireless charging

In fact, I find the iPhone X does not meet user expectations and the improvements Apple has made are not really convincing enough for users to withdraw their wallets. How about you? Are you willing to spend \$ 1,000 to own this iPhone X? Its price to Vietnam is expected to range from VND 28 to 29 million.

1. iPhone 6S is the last great iPhone phone, the rest is not worth buying
