

Real pictures of Galaxy S4 and iPhone 5 Taiwan in Vietnam

At first glance, many people will probably mistakenly believe that the Galaxy S4 and iPhone 5 are real but going into the details can be a little different.

At first glance, many people will probably mistakenly believe that the Galaxy S4 and iPhone 5 are real but going into the details can be a little different.

iPhone 5 and Galaxy S4 are two of the smartphones that receive the most attention in the Vietnamese market not only because they own high-end features but also because the prices are also among the top up to 15, 16 million VND, only for those who are financially well off.

Therefore, the appearance of Galaxy S4 and iPhone 5 originating from Taiwan with a **cheap price of only 1/3** has quickly received much attention and reception of phone buyers especially in economic times. There are many difficulties, the use of good phones is something everyone wants but not everyone can do.

We had the opportunity to hold two smoldering phones in Vietnam in the short time. The most noticeable common characteristics of these two Galaxy S4 and iPhone 5 are very similar in design to the " *genuine* " of Apple and Samsung from the layout of buttons, fake metal frame on Galaxy S4 to the feeling light sense of iPhone 5.

At first glance, many people will probably mistakenly believe that the Galaxy S4 and iPhone 5 are real but going into the details can be a little different.

First is the Galaxy S4 Taiwan with 3 versions including a **quad-core chip with 1.2 Ghz speed and 2 GB of RAM** , the version uses a **quad-core chip of 1.2 Ghz** with **1 GB** and a **dual-core chip 1.5 Ghz** with prices of 4.9 million, 4.7 million and 3.8 million respectively.

The caro around the screen is made very similar to Samsung's Galaxy S4 but it looks more coarse.

The Galaxy S4 Home button costs nearly 4 million donges for a more solid feel. The power button and volume control keys are also quite bouncing.

Imitation metal frame with a thinness equivalent to Samsung's Galaxy S4, but it is taken care of when creating a seamless block with the back cover of the machine rather than some cases of genuine Galaxy S4 purchase has encountered The case of the case does not completely match the body.

The back of the Taiwan Galaxy S4 is also crafted with the same material from Samsung from appearance to

strong fingerprint printing properties. The back camera of this smartphone also shares the same 13 megapixel resolution with Samsung's Galaxy S4.

Interior when opening the back of the device is similar to Galaxy S4 from Samsung with memory card slot and SIM slot while the battery capacity also reached 2,600 mAh like the real version.

However, unlike the Samsung Galaxy S4, if you pay close attention, we can see that this low-end Galaxy S4 version has a thick screen border.

The copy of this Galaxy S4 is also equipped with a separate case even though it is not as versatile as the case produced by the Korean manufacturer itself.

The accessory kit is quite rich not only for the case but also for the extra battery.

Besides Taiwan Galaxy S4, the iPhone 5 version running Android also received no less hunting from the user. The machine is currently sold for VND 4 million. According to Thai Ha store manager Digital 426 Kim Lien, Xa Dan, Hanoi, this smartphone is having good sales.

Unlike Taiwan Galaxy S4, this iPhone 5 copy has the design to achieve the necessary sophistication, which makes many people confused when placed next to Apple iPhone 5. The buttons, camera position are not different while the overall size also carries the real iPhone 5 appearance. However, there are differences if the viewer is observant.

The first is weight, even though Apple's iPhone 5 is light but still feels that this iPhone 5 with Google's soul is lighter. In addition, the screen of this iPhone 5 does not achieve high brightness as on genuine equipment from Apple. In addition, the screen of the machine also has a wide viewing angle when just looking at it with a small angle is a little color has changed.

iPhone 5 Android is equipped with dual-core processor with a speed of 1.5 Ghz and 1 GB RAM and a 4-inch screen. This can be considered a mid-range configuration for an Android smartphone.

When I turned on the phone, I ran a few of the default applications in my phone, even those who have made friends with the iPhone for years are not sure because everything is very similar to iOS. It is only at the time of opening some specific applications that the difference is clear. It can be said that the App Store: Instead of showing up the App Store as Apple's iPhone, this iPhone 5 "turns on" on Play Store proves that the original operating system is Android.

The rear camera of the iPhone 5 running Android has an 8 megapixel resolution and is supported by LED flash.

Instead of using nano SIM as on Apple's iPhone 5, this "combined" iPhone 5 uses a micro SIM card slot.

The software interface is very similar to iOS's Apple operating system, so it's easy to confuse.
