

Realme is about to announce the world's fastest charging technology 320W SuperSonic

Realme is preparing to announce the world's fastest charging technology 320W SuperSonic to the public at an event taking place in China from August 13 - 15.

This technology surpasses the 300W technology that Redmi recently introduced to become the fastest charging technology in the world today.

Previously, a leaked video showed super-fast charging from Realme's 300W technology capable of fully charging 17% of the battery in just 35 seconds. Charging speed promises to be even more impressive with 320W SuperSonic technology.

In fact, this is not the first 300W fast charging system. In February 2023, Redmi announced a similar charging solution that fully charges the 4,100 mAh battery from 0 - 100% in just 5 minutes. However, to date, no Xiaomi Redmi phone has actually used this 300W charging technology.

With 320W SuperSonic, Realme may only be a "technology demonstration" without any actual device being used, but it can help the company continue to assert its leading position in the field of fast charging on smartphones.

Realme has come close to 240W wired fast charging technology - already available on the Realme GT5 and Realme GT Neo 5 phones.

In addition to charging technology, Realme will also introduce other new technologies such as AI (artificial intelligence), performance and imaging at the upcoming event.

With constant advances in fast charging technology, Realme is bringing increasingly convenient and outstanding experiences to smartphone users. The launch event of 320W SuperSonic technology promises to be a notable highlight in the mobile industry in the near future.
