

Realme is about to launch a 43-inch smart TV

Realme is one of the hottest brands in 2019 with a relatively fast growth rate compared to other competitors in the market. The company is now expanding its influence in the Indian potential market with the launch of a Smart TV.

Besides betting on smartphones, the company will expand its portfolio to new devices. Last month, Realme launched its first smartband. Currently, the Chinese company is preparing to announce a new smart TV and smartwatch.

Realme preparing to introduce smart TV?

The design of the smartwatch came out a few days ago but we still have too little information about Realme TV. However, recently, the first details about Realme TV have appeared on the website of BIS - the Indian equipment certification agency, similar to China's TENAA or the US FCC.

An image appearing on Bureau of India Standards (BIS) reveals the company's smart TV will be called Realme TV 43. It has model number JSC55LSQL and will have a 43-inch screen. This is not a big size in the current TV market but it is probably Realme's strategy to keep the price at the most reasonable price.

Information about the recently leaked Realme 43 inch TV

Of course, this does not mean that Realme will not release TVs of other dimensions. Realme's new TV is expected to be available this quarter, so more information is expected in the coming days.

Many are waiting to see which software Realme will use for their TVs, is that a new version of Realme UI for smart TVs?
