

# Recover and repair corrupted Word files - Repair Doc files

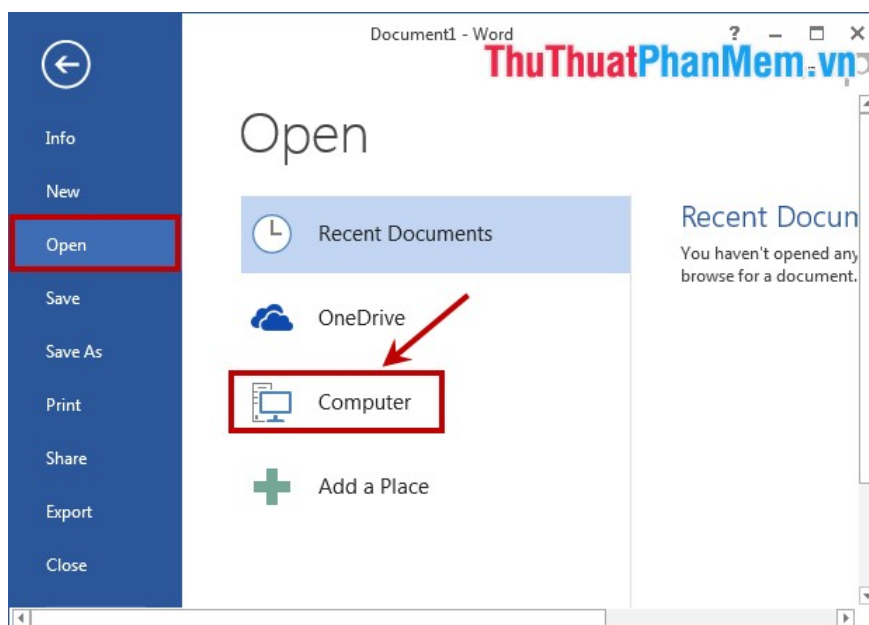

In the following article will guide you how to use the Repair feature available in Word and the software to help you recover corrupted Word files.

In the process of using Word, sometimes you will encounter cases of opening Word files but errors cannot open. You do not know what to do when the file is a file that does not contain much important data.

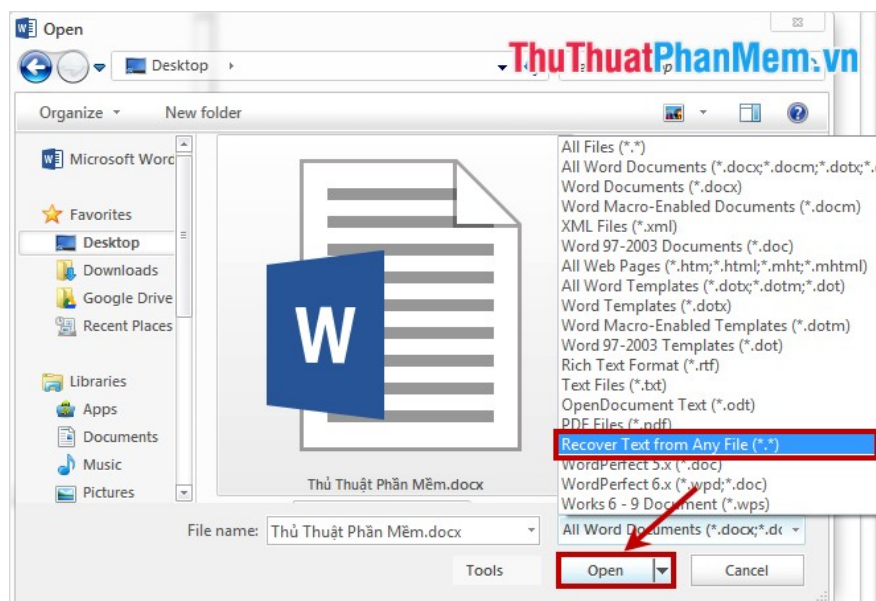

In the following article will guide you how to use the Repair feature available in Word and the software to help you recover corrupted Word files.

## 1. Use the Repair feature available in Word.

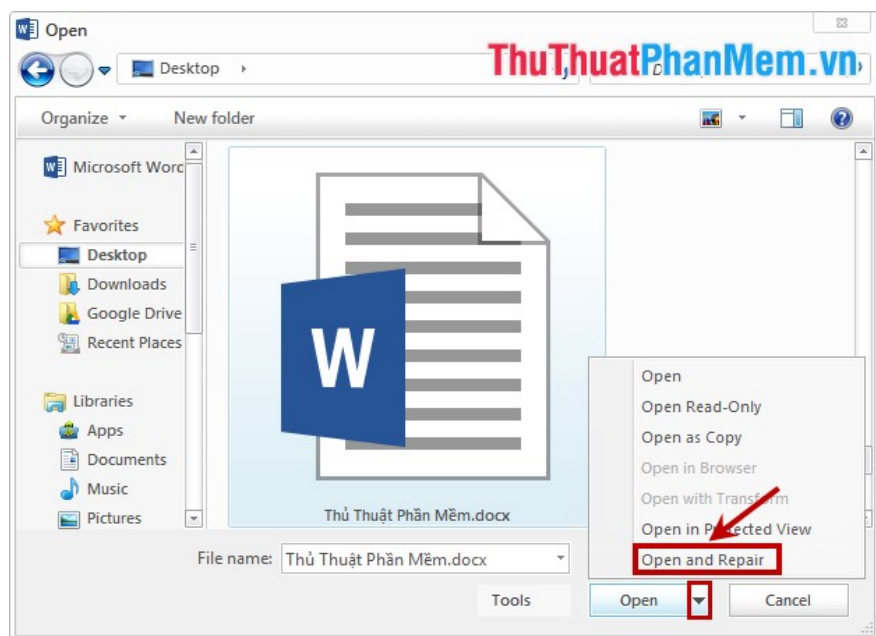

First you open Word, then select **File -> Open ->** select the location of the error file.

In the **Open** dialog box , navigate to the faulty file and select **Recover Text from Any File** next to the **File Name** box . Then click **Open** to open the file.

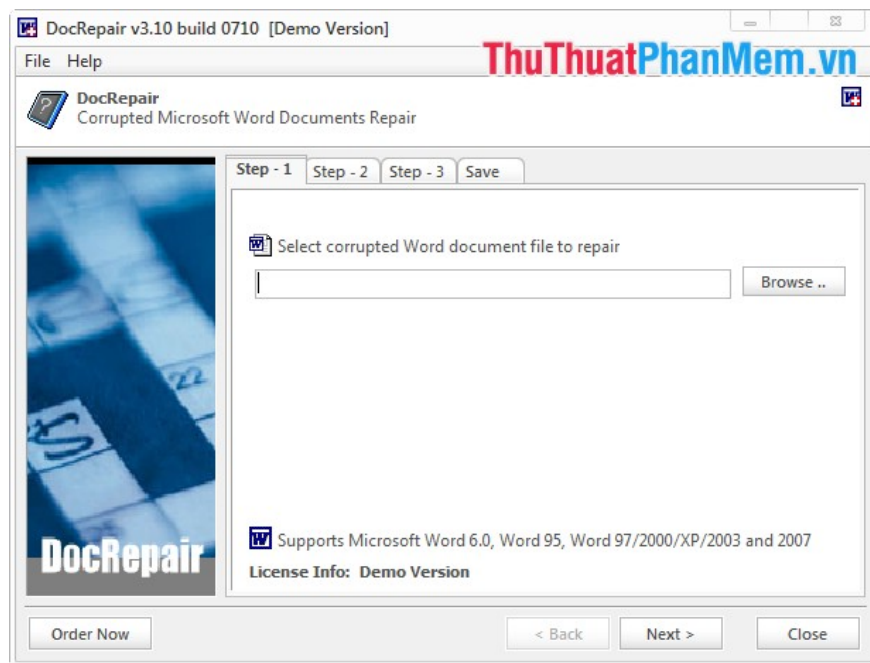

In addition, you can use the Word file recovery feature by opening the **Open** dialog box , instead of clicking **Open** to open, you select the opposite triangle next to the word **Open** and select **Open and Repair** to restore fix errors and open the file.

## 2. Use the software to recover corrupted files.

If you use the corrupted Word file recovery feature and still cannot open the corrupted Word file. You can use **DocRepair** software to fix Word file errors.

You download and install DocRepair into the system, DocRepair's error recovery process consists of 3 steps, you follow the steps on the program interface.

So you know some ways to recover corrupted Word files, you can apply to fix when encountering case of corrupted Word file. Good luck!
