The program's interface is simple and easy to use. To use it, follow these steps:

Step 1 : Click the **Open File** button on the screen to open the WinRAR file you want to recover.

Step 2 : Next, click the **Start** button to begin the password recovery process.

Additionally, you can also use the program's methods in the **Recovery Method** section , or in **Recovery Settings...**

- **Auto** : The program automatically selects combinations to search for the password.
- **Brute-force** : A common option, which involves combining all possible characters to guess the password; however, this method is time-consuming, especially for long and complex passwords.
- **Dictionary** : The program will combine words from the dictionary files to try passwords until it finishes. This option is suitable for passwords that are phrases or single words.
