

Redmi K30 Pro Zoom Edition officially launches 12GB RAM and 512GB internal memory, 30X digital zoom

Today (April 7), Redmi officially launches the K30 Pro Zoom Edition 12GB RAM version and 512GB internal memory.

Xiaomi's independent brand Redmi has really had a spectacular makeover with the Redmi K30 series launched last month in China. New product range includes Redmi K30, K30 Pro and K30 Pro Zoom Edition. In particular, the Pro Zoom Edition is the most advanced version with digital zoom up to 30x.

The Xiaomi Redmi K30 Pro Zoom Edition will debut as Mi 10T Pro.

Recently, Redmi has announced a more advanced version of the K30 Pro Zoom Edition with 12 GB LPDDR5 RAM and UFS 3.1 memory with 512 GB capacity. The Redmi K30 Pro Zoom Edition has a 6.67-inch FHD + E3 Super AMOLED screen. The device is equipped with Qualcomm Snapdragon 865 chip along with Snapdragon X55 modem, supporting devices for both SA / NSA modes on the 5G platform. In terms of design, the K30 Pro uses a 3D glass back on the back with a liquid cooling system. The front camera is still a pop-up type, a design that is not popular anymore recently but offers a completely smooth screen experience. 4 rear camera system is really impressive with 64 MP main camera using Sony IMX686 sensor with four-axis optical image stabilization, 8-megapixel telephoto camera with 3x optical zoom and 30x digital zoom and 13-megapixel ultra wide-angle camera with 123 ° viewing angle and 2MP depth sensor. Redmi K30 Pro Zoom Edition is running MIUI 11 on Android 10. It also has a 4,700 mAh battery with 33W fast charging, fully charged in 63 minutes.

This version is expected to cost about 15 million VND and will be sold in the Chinese market from today (7/4). This price is really impressive for the worthwhile upgrade on this version.
