

Resizer - Google's new support tool

This is one of Google's new support tools for designers, code, the main purpose is to test the visibility of websites on computers, smartphones and tablets.

This is one of Google's support tools for designers, code, the main purpose is to test the visibility of websites on computers, smartphones and tablets. All you need to do is access the **Resizer path** :

1. <http://design.google.com/resizer>

Enter the URL of the website to test into the empty box, and Google Resizer will immediately display the equivalent interface of the website on the emulator set of computers, tablets and smartphones as shown above. At the top right corner of the screen is the display mode, including:

1. Summary: computer + tablet + smartphone.
2. Tablet.
3. Smartphone

Note that this tool should only be used while responsive design. To make sure that the display is correct, you should still test on the device to be 100% sure. **Good luck!**
