In this article, TipsMake.com will guide you how to recover data on Android with Google Backup.

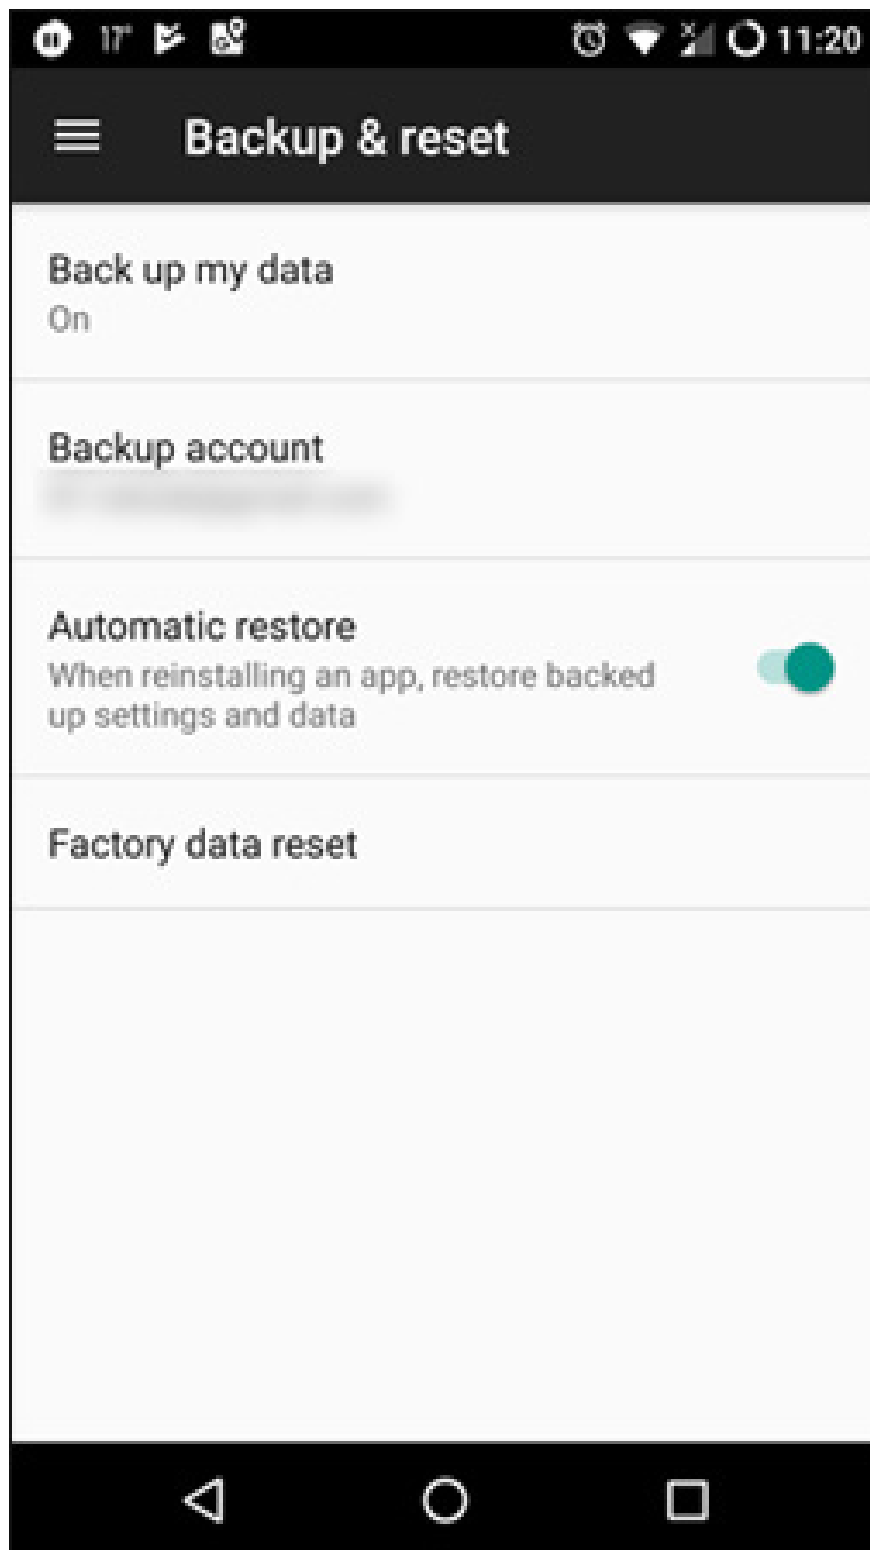

Just a few simple swipes on Android that you accidentally deleted some important content such as contacts, messages or other important things in your phone. If you accidentally lose those data, don't worry, there are many applications that help retrieve those lost settings and data. In this article, TipsMake.com will guide you how to recover data on Android with Google Backup.

1. Backup and restore Android phone with Titanium Backup

How to use Google Backup

You need to ask Google to automatically back up all data on your Android device. To check if this feature is enabled, on Android screen, select **Settings -> Backup & reset** and activate **Back up my data** . You should also turn on the **Automatic restore** slider to ensure that the applications you restore will include all data and settings.

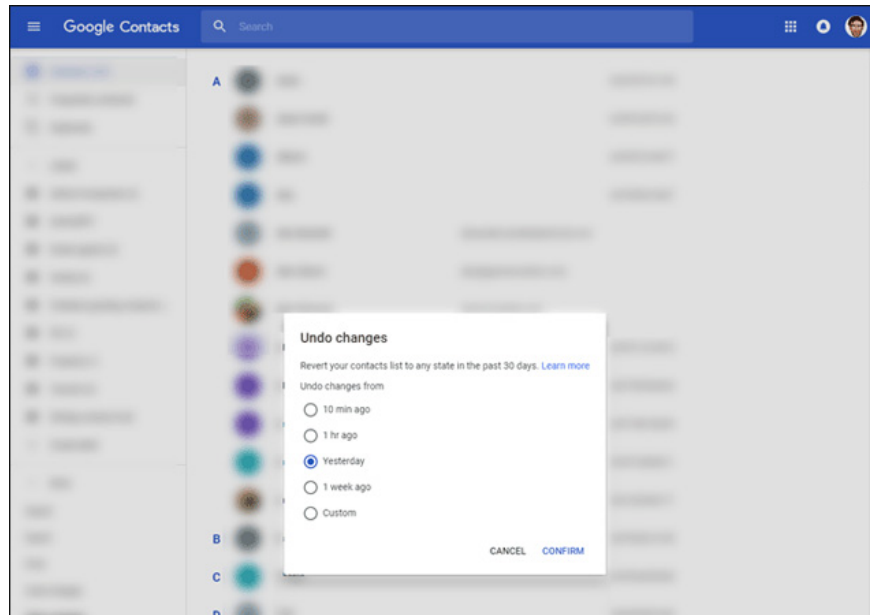

Now, on your Android phone, you only need to log in to your Google account as the backed up data will automatically be restored to the device. It's that simple, isn't it?

Restore Google contacts

If you accidentally delete many important phone numbers, don't worry, Google will automatically sync your phone contacts with your Google account so you can easily restore them. (in 30 days).

Log in to your Google account on your computer, click **Gmail**, then select **Contacts**. On the Contacts page, click **More** in the left panel, then click **Undo changes** . Here, you can restore Contacts at any time in the previous 30, meaning you can restore deleted data during that time period.

Besides the Google Backup data backup and recovery tool, you can also refer to the DiskDigger and DigDeep applications.

In general, there are many solutions to restore settings and data on your Android device. The important thing to not lose data is that you must always update new backups. If you are wondering how to retrieve lost data, please follow the steps above!
