

The Restyle tool in Paint turns doodles into masterpieces

Microsoft is introducing Restyle, a new AI-powered feature for the Paint app that lets users change the artistic style of an image directly on the Paint canvas.

Microsoft introduced Restyle, a new AI-powered feature for the Paint app. This feature allows users to change the art style of images directly on the Paint canvas. Users can choose from pre-installed art styles and create new stylized versions of their images.

The feature is currently available to Canary, Dev, and Beta users enrolled in the Windows Insider program. It can be accessed through the Copilot menu in Paint, allowing for enhanced creativity without the need for third-party software.

You will need to update Paint to version 11.2509.441.0 and then click Copilot to open the menu. Next, click Restyle and select the art style in the photo to convert. Users can choose from pre-installed art styles and create new stylized versions of their images. Finally, click Generate and wait for the AI to create the redesigned image.

Once you are satisfied with the artwork, click Add to canvas, Copy or Save to save the image.
