

Revealing how MXH Lotus protects users, has genuine 'green tick', does not sell user data

Recently, VCCorp has revealed a part of how Lotus uses it to ensure information security for users.

Security and information security issues for social network users are always a headache problem for any brand. Therefore, when there is information about Lotus - the social network owned by Vietnamese people will be launched in the near future, the online community is not concerned about the privacy of users.

1. Vietnam is going to have Lotus social network, revolving around content, giving tokens to users

Seemingly aware of this concern of many users, VCCorp recently revealed a part of how Lotus uses it to ensure information security for users.

Compliance with the law, no infringement of privacy

Lotus is made and designed on the basis of Vietnamese law, ensuring compliance with the laws on ensuring personal information.

VCCorp's General Director, Mr. Nguyen The Tan affirmed that: "We certainly do not sell user data".

Account identifier, authenticated as "green tick"

Lotus will also have a form of identification, authenticating the user account in a form like the "green tick" of Facebook. Users only need to have proof of ownership of their own account and accept to sign a confirmation document will be granted the relevant "green tick". The granting of a green tick will not be relevant and depends on the follower number or the "big" Token.

Individuals cannot buy or sell these traces.

Censoring content, limiting fake information

Lotus will have automated algorithms to review the content of infringement. This social network will cooperate with experts and legal agencies . to handle forms of fraud, selling fake goods, fake news, spreading rumors to violate the law .

Users themselves will be responsible for the information they put up.

In addition, Lotus also has anti-spam Token mechanism (almost like virtual Like).
