

# Revealing the secret to charging your iPhone battery super fast

Currently, although accessory companies have launched a series of accessories to help charge iPhone batteries faster, not everyone knows how to both charge quickly and protect iPhone batteries properly.

With the increasing convenience in charging technology, many iPhone users tend to adopt incorrect charging methods. One of the common misconceptions is that using a high-capacity charger will increase charging speed.

Many people think that using a charger with a higher output power will help charge the iPhone faster. However, in reality this view is not accurate, because most iPhone models already support fast charging with a maximum capacity of 20W.

Therefore, if you use a charger with a capacity greater than 20W, it does not mean that the **iPhone**'s battery will charge faster. Instead, it sometimes causes the phone battery to overheat and easily cause damage. Explosion.

In addition, through tests, experts also advise that users should choose a USB to Lightning cable from Apple instead of using a third party, because using a genuine cable will help ensure Ensures the fastest charging speed for iPhone phones.

Besides, choosing the correct charger and charging cable according to prescribed standards, you can also do the following to charge your phone battery faster and also protect your phone battery better.

- Turn off applications running in the background, because turning off applications running in the background will help reduce the amount of battery consumption on your phone, thereby helping your iPhone charge faster.

- Do not charge your iPhone while using it, because this process will cause the iPhone to heat up faster and the iPhone charging process will be affected.

- Turn on airplane mode and turn off Wifi/Bluetooth. In case, turning on airplane mode will help *your iPhone* charge faster than when the phone has signal and connects to Wifi/Bluetooth.
